

# ABSTRACT OF SANITARY REPORTS.

VOL. X.

WASHINGTON, D. C., MAY 17, 1895.

No. 20.

TREASURY DEPARTMENT, *United States Marine-Hospital Service*.—Published in accordance with act of Congress approved February 15, 1893.

## UNITED STATES.

[Reports to the Supervising Surgeon-General M. H. S.]

### *Smallpox in Kentucky.*

BOWLING GREEN, KY., *May 8, 1895.*

SIR: I have the honor to inform you that since my last letter on the subject, the following cases of smallpox have occurred in this State: Fourteen cases at Lexington, Fayette County; 6 cases at Ashland, Boyd County; 10 cases at Princeton, Caldwell County; 30 cases at Paducah, McCracken County; 3 cases at the K. Y. Union Junction, Clark County; 1 case at Winchester, Clark County; 1 case at Williamstown, Grant County; 2 cases at High Bridge, Jessamine County; 1 case at Maysville, Mason County; 4 cases at Louisville, Jefferson County; 1 case at Henderson, Henderson County.

The disease has been almost exclusively confined to negroes. The disease is entirely under control, except at Paducah and Princeton, where there have been some recent exposures, and a few other cases are likely to occur.

Very respectfully,

J. N. McCORMACK,  
*Secretary State Board of Health.*

### *Smallpox in New Orleans.*

NEW ORLEANS, LA., *May 10, 1895.*

SIR: I have the honor to report that during the past ten days 5 roustabouts from Mississippi River steamboats applied for treatment at the Marine-Hospital Office, Custom-House, who were found to be suffering from smallpox. The cases were at once turned over to the local health authorities and sent to the city pesthouse, and the office fumigated with sulphur, as usual.

Very respectfully,

HENRY W. SAWTELLE,  
*Surgeon, M. H. S.*

*Smallpox at Staunton, Va.*

STAUNTON, VA., May 11, 1895.

SIR: Yours of the 10th just received, and I hasten to reply. I have on hand 17 cases of smallpox in town, 13 of which are convalescent, and 4 still ill. Also have 2 cases in the county, one 3 miles from town on the Middlebrook road and one 12 miles in the country at Middlebrook. Four have died in town and 1 in county. The epidemic is of the discrete and confluent variety. Twelve of the town cases are confined to the hospital and 5 guarded and looked after at their homes. No new cases to-day, but prodromal symptoms in 2. Any further information I can furnish you I will gladly give.

Very respectfully,

J. B. CATLETT,  
City Physician.*Two cases of Smallpox in Memphis—Action of the Memphis Board of Health.*

MEMPHIS, TENN., May 10, 1895.

SIR: Referring to my telegrams of yesterday and to-day, reporting 2 cases of smallpox received from the steamer *Buckeye State*, and turned over to the local health authorities without admission to this hospital, I have the honor to give further information upon these cases. The first patient shipped aboard the boat at Cincinnati on May 4, and was taken sick with the disease on the 6th. The second patient shipped at Louisville May 5, after having been in many different places the previous month, and was taken sick with the disease on the 7th. This case was not so well marked as the first, but I believe it is smallpox or varioloid. The patient had been vaccinated in childhood; the first patient had not been vaccinated. Both are negroes. \* \* \* Steamboatmen from Cincinnati have told me that there has been an epidemic of smallpox at that port this year. Dr. G. B. Thornton, president of the Memphis board of health, has informed me of his intention to quarantine against the steamers *Buckeye State*, *State of Kansas*, and *J. P. Jackson* until they can present bills of health showing proper disinfection.

Very respectfully, yours,

A. C. SMITH,  
Passed Assistant Surgeon, M. H. S.

MEMPHIS, TENN., May 10, 1895.

SIR: I inclose you a copy of an order which has been served on the captains of the Cincinnati and Memphis packets *Buckeye State* and *State of Kansas*. We are also reliably informed that the Cincinnati and New Orleans freight boat, *J. P. Jackson*, has had smallpox on board. We are told that this boat put off a case at Vicksburg, Miss., on May 1.

Very respectfully,

I. H. EDGINGTON, M. D.,  
Acting Secretary Board of Health.

[Inclosure.]

MEMPHIS, TENN., May 10, 1895.

Notice is hereby given to the captains of the Cincinnati and Memphis packets *Buckeye State* and *State of Kansas* not to again land at the Memphis wharf until properly disinfected and provided with a clean bill of health from an officer of the Marine-Hospital Service, both boats having had cases of smallpox on board.

By order of the board of health:

I. H. EDGINGTON, M. D.,  
Acting Secretary Board of Health.

*Vaccination of River Boatmen on the Ohio and Mississippi Rivers.*

NASHVILLE, TENN., May 2, 1895.

SIR : At a recent meeting of the Tennessee State board of health, the following action was taken, and the secretary directed to communicate the same to yourself :

Whereas, recently there has developed smallpox among the river boatmen at Memphis, Vicksburg, Paducah, and Wheeling, thus demonstrating a widespread infection among the marine of the great valley ; therefore, be it

*Resolved*, That the Surgeon-General of the Marine-Hospital Service be and he is hereby requested to without delay have vaccinated the unprotected of this class engaged upon the waterways which have, or may have, commercial relations with Tennessee.

All of which is respectfully submitted to your attention by

J. BERRIEN LINDSLEY, M. D.,

*Secretary and Executive Officer.*

A similar letter has been received from the Secretary of the Ohio State board of health. The following orders have been issued to medical officers and acting assistant surgeons of the Marine-Hospital Service on duty at Mississippi and Ohio River ports :

TREASURY DEPARTMENT,  
OFFICE OF THE SUPERVISING SURGEON-GENERAL M. H. S.,  
WASHINGTON, D. C., May 6, 1895.

MEDICAL OFFICER IN COMMAND,

PORT OF ———,

*United States Marine Hospital Service :*

SIR : You are hereby directed, without delay, to vaccinate the crews of all river craft who have not been recently successfully vaccinated, the operation to be performed either at the Marine Hospital office or on board of the vessels, as may be most convenient. This order will be sent to all stations on the Ohio River, and the action is taken in view of the recent spread of smallpox, indicating an infection among the boatmen on the river.

Respectfully, yours,

FAIRFAX IRWIN,

*Surgeon, M. H. S.,*

FOR SUPERVISING SURGEON-GENERAL M. H. S.

NEW ORLEANS, LA., May 9, 1895.

SIR : I have the honor to report that a system of vaccination of crews of Mississippi River steamboats has been inaugurated at this port in accordance with your directions when here recently. Two temporary sanitary inspectors have been employed to do the work, one for day and the other for night service. The crews of all steamboats arriving here are inspected, and those requiring it are vaccinated. At a meeting of the masters and agents held on the 7th instant, which I attended, it was agreed that the crews of outgoing steamboats should also be vaccinated before leaving port, and no man is now employed on outgoing steamers without a certificate showing that he has been vaccinated.

\* \* \* \* \*

Very respectfully,

HENRY W. SAWTELLE,

*Surgeon M. H. S.*

The following letter was issued by Surgeon H. W. Sawtelle, M. H. S. :

NEW ORLEANS, LA., May 6, 1895.

*To Masters, Owners and Agents of Mississippi River Steamboats, New Orleans, La.:*

GENTLEMEN : In view of the continued prevalence of smallpox among the roustabouts of river steamers arriving at New Orleans, the Surgeon-General of the United States Marine Hospital Service has directed that the crews of such vessels be vaccinated here, and a sanitary inspector has been employed to do the work. It is proposed to vaccinate the crew of each vessel as soon as practicable after arrival, excepting persons who are protected by a previous attack of the disease or by a recent successful vaccination. If any suspicious cases are found among the passengers they also will be vaccinated. In case vaccination is refused by any person requiring it, in the opinion of the inspector, said party will be subject to a quarantine of fourteen days. Vaccinations will be made on board, and to avoid interference with the business of vessels, masters are requested to notify the sanitary inspector at the Marine Hospital office, Custom-House, when they will be ready for the inspection, and all persons should be detained on board until the work is completed. The crews of outgoing steamers will also be inspected. It is believed that with the cooperation of masters, agents, and others the work can be successfully accomplished with but little, if any, interference with the shipping of the port, and, moreover, prove an important aid to the local board of health in its efforts to guard the public from a loathsome disease.

HENRY W. SAWTELLE,  
*Surgeon, M. H. S., in Command of Hospital.*

*Change of Designation of Quarantine Station at Mullet Key, Fla.*

JACKSONVILLE, FLA., May 10, 1895.

SIR : The quarantine station at Mullet Key, Tampa Bay, will in future be officially known as the Tampa Bay Quarantine Station.

Very truly, yours,

JOSEPH Y. PORTER, M. D.,  
*State Health Officer.*

*Two Deaths from Yellow Fever on the Steamship Hogarth, en route from Santos to New York.*

QUARANTINE, S. I., May 13, 1895.

SIR : In answer to your communication of May 11 regarding 2 deaths which occurred on the steamship *Hogarth* while en route to New York from Santos, I have to say that this vessel left Santos on April 8 ; within five days afterward the chief engineer and 2 of the crew were taken ill ; 1 recovered, and 2 died before April 22. There was no sickness on board after this date (April 22).

The *Hogarth* arrived at quarantine May 8, and after obtaining the above history I assumed that the men already referred to had been affected with yellow fever ; the vessel was consequently detained at this station until thorough disinfection had been performed.

Respectfully,

A. H. DOTY,  
*Health Officer, Port of New York.*

*Reports of States and Yearly and Monthly Reports of Cities.*

CALIFORNIA—*Sacramento*.—Month of April, 1895. Estimated population, 30,000. Total deaths, 39, including phthisis pulmonalis, 6.

CONNECTICUT—*Hartford*.—Month of April, 1895. Estimated population, 60,000. Total deaths, 71, including phthisis pulmonalis, 4; scarlet fever, 1; and croup, 2.

DELAWARE—*Sussex County* (published incorrectly as mortality statistics for Wilmington in ABSTRACT dated May 10, 1895).—Quarter ended March 31, 1895. Estimated population, 38,000. Total deaths, 78, including phthisis pulmonalis, 14; enteric fever, 2; and croup, 3.

FLORIDA—*Ocala*.—Month of April, 1895. Estimated population, 5,000; One death. No deaths from contagious diseases.

*Pensacola*.—Month of April, 1895. Estimated population, 15,000. Total deaths, 20, including phthisis pulmonalis, 3; and enteric fever, 1.

*Tampa*.—Month of April, 1895. Estimated population, 18,000. Total deaths, 22, including 2 from phthisis pulmonalis.

KENTUCKY—*Louisville*.—Month of April, 1895. Estimated population, 200,000. Total deaths, 366, including phthisis pulmonalis, 43; enteric fever, 9; smallpox, 1; diphtheria, 1; croup, 2; and measles, 3.

MASSACHUSETTS—*Newton*.—Month of April, 1895. Estimated population, 30,278. Total deaths, 35, including phthisis pulmonalis, 2; and enteric fever, 1.

*Northampton*.—Month of April, 1895. Estimated population, 16,400. Total deaths, 12, including phthisis pulmonalis, 1; and whooping cough, 1.

MICHIGAN.—Week ended May 5, 1895. Reports to the State board of health, Lansing, from 51 observers, indicate that inflammation of kidney increased, and pneumonia, pleuritis, influenza, and tonsilitis decreased in area of prevalence. Phthisis pulmonalis was reported during the week at 143 places; scarlet fever at 36; diphtheria at 20; measles at 20; enteric fever at 10; and smallpox at 2 places—Brownstown Township and Detroit.

*Grand Rapids*.—Month of April, 1895. Population, 80,000. Total deaths, 106, including phthisis pulmonalis, 12; enteric fever, 4; scarlet fever, 2; and diphtheria, 1.

MINNESOTA—*Minneapolis*.—Month of April, 1895. Estimated population, 223,700. Total deaths, 165, including phthisis pulmonalis, 29; enteric fever, 3; scarlet fever, 1; diphtheria, 5; and whooping cough, 7.

MISSOURI—*Kansas City*.—Month of April, 1895. Population, 132,716. Total deaths, 102, including phthisis pulmonalis, 4; croup, 2; measles, 1; and whooping cough, 3.

NEW HAMPSHIRE—*Concord*.—Month of April, 1895. Estimated population, 19,000. Total deaths, 33, including 4 from phthisis pulmonalis.

NEW YORK—*Buffalo*.—Month of April, 1895. Estimated population, 315,000. Total deaths, 351, including phthisis pulmonalis, 37; enteric fever, 5; scarlet fever, 4; diphtheria, 5; croup, 5; and whooping cough, 5.

OHIO—*Columbus*.—Month of April, 1895. Estimated population, 100,000. Total deaths, 98, including phthisis pulmonalis, 22, and scarlet fever, 1.

PENNSYLVANIA—*Williamsport*.—Month of April, 1895. Estimated population, 35,000. Total deaths, 26, including 3 from phthisis pulmonalis.

SOUTH DAKOTA—*Sioux Falls*.—Year ended April 30, 1895. Estimated population, 13,564. Total deaths, 93, including phthisis pulmonalis, 7; enteric fever, 7; and diphtheria, 2.

**TENNESSEE—Clarksville.**—Month of March, 1895. Estimated population, white, 6,000; colored, 4,000; total, 10,000. Deaths, white, 3; colored, 6; total, 9, including 1 from phthisis pulmonalis.

**Memphis.**—Month of April, 1895. Estimated population, white, 28,064; colored, 27,859; total, 55,923. Deaths, white, 45; colored, 55; total, 100, including phthisis pulmonalis, 17; enteric fever, 1; and diphtheria, 2.

**Murfreesboro.**—Month of March, 1895. Estimated population, white, 3,000; colored, 2,000; total, 5,000. Deaths, white, 2; colored, 3; total, 5, including 1 from phthisis pulmonalis.

**Nashville.**—Month of April, 1895. Estimated population, white, 54,595; colored, 33,159; total, 87,754. Deaths, white, 79; colored, 72; total, 151, including phthisis pulmonalis, 25; enteric fever, 1; scarlet fever, 2; and croup, 1.

**TEXAS—Laredo.**—Month of April, 1895. Estimated population, 12,000. Total deaths, 12, including 1 from phthisis pulmonalis.

**WISCONSIN—Milwaukee.**—Month of April, 1895. Estimated population, 275,000. Total deaths, 321, including phthisis pulmonalis, 31; smallpox, 4; enteric fever, 6; scarlet fever, 1; diphtheria, 8; croup, 2; and whooping cough, 6.

*Current Quarantine Measures.*

[Translated in this Bureau from the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, April 24, 1895.]

**GERMAN EMPIRE—Prussia.**—On March 30 the president of the district of Oppeln addressed the following to the local authorities of the districts of Kattowitz, Beuthen, Lublinitz, Tarnowitz, Pless, Kreuzburg, and Rosenberg:

Circulars of June 30, 1894, and July 25, 1894, requiring laborers entering those districts from Russia and Galicia to present a certificate from the police authorities as to the sanitary condition of their place of departure, are hereby amended.

Such laborers are required to undergo examination by a German physician, said examination being directed both to their persons and effects, with a view to detecting the presence of cholera, choleraic diseases, typhus, and smallpox. In suspicious cases the laborers shall be remanded across the frontier. Laborers on their way through the districts named to other ports of the Empire shall be subject to the same examination.

**ITALY.**—By ministerial order of April 6 quarantine against French ports and the Russian ports of the Baltic Sea is suspended.

**TURKEY.**—According to advices received from Smyrna, April 5, the ten days' quarantine for pilgrim vessels from Constantinople for the Hejaz is reduced to forty-eight hours. This measure is restricted to vessels now lying in quarantine. According to advices of April 5 the international sanitary council of Constantinople has ordered an inspection for all arrivals by land caravan from Asia Minor at the lazaretto of Tuzla; for arrivals from Roumelia, quarantine at the lazarettos of Tschataldja or Kallieratia.

**BRAZIL.***Sanitary Reports of Rio de Janeiro.*

**RIO DE JANEIRO, April 9, 1895.**

**SIR:** I have the honor to transmit report for week ended April 6, 1895. There were 19 deaths from *accessio pernicioso*, the same as in the foregoing week; 39 from yellow fever, an increase of 19; 5 from smallpox, an increase of 2; 3 from enteric fever, a decrease of 11; 9 from beriberi, an increase of 2; 5 from cholera, an increase of 3; 1 from cholera, the same as in the foregoing week; 10 from choleraform diarrhea, an increase of 4; 1 from choleraform enteritis, and none from "*accessio pernicioso choleraform*," against 1 reported from this cause (whatever it is) last week. The total from all causes was 391, an increase over the previous week of 59.

**Yellow fever.**—The increase in yellow fever cases may be due to the hot and sultry weather prevailing, but it is to be thought that this can not continue at this season. I have heard of several cases amongst the shipping, but none on board ships bound for the ports of the United States.

**Cholera.**—This disease continues pretty much in the same intensity, and does not appear to be extending. I believe that most, if not all the choleraform diseases reported are cholera, as there appears to be an unwillingness to characterize this disease by its proper name; besides, cholera or noncholera has become almost a party question, unfortunately, and men appear to decide, not from a scientific point of view, but for party reasons, which feeling I believe to have been a cause of the intro-

duction of the disease into this town. On the 3d of April a telegram from Bahia announces cases there. Santo Antonio de Muriatre had 18 cases, with 15 deaths. It reappeared in Porto Novo. In Volto Redondo 1 case appeared, and in the plantations named, Barra, Fanae, and Monte Redondo, there were 12 deaths in twelve hours. One case appeared in Alegre, in Espirito Santo, though the disease is reported as finished in that State. Most of the deaths here were in the insane asylum and some in the military school near it. Both institutions have been disinfected, isolated, and closed. I hope to have a more hopeful report to make next week.

Since last report the following-named ships have been inspected and received bills of health from this office. April 2, bark *Flora*, British, for Brunswick, Ga.; April 3, steamship *Euclid*, British, for New York; April 6, steamship *Turkish Prince*, English, from Buenos Ayres to New York; and April 8, steamship *Bessel*, British, from Santos for New York.

Respectfully, yours,

R. CLEARY, M. D.,  
Sanitary Inspector, M. H. S.

RIO DE JANEIRO, April 16, 1895.

SIR: I have the honor to inclose report for week ended April 13, 1895. There were 17 deaths from *accessio pernicioso*, the same as in the foregoing week; 32 from yellow fever, 7 less; 6 from smallpox, 1 more; 3 from enteric fever, the same as in the previous week; 4 from beriberi, a decrease of 5; 1 from measles, 1 from whooping cough; 2 from cholera, a decrease of 3; 2 from cholera, an increase of 1; and 9 from other so-called choleraic diseases, a decrease of 2. There were 364 deaths from all causes, which is 27 less than in the previous week.

*Cholera*.—This disease appears to be declining wherever it has appeared. Here it does not appear to be spreading. Some see cholera in every summer diarrhea that appears, and others invent extraordinary names to cover cases called cholera in other parts, as witness the list of death cases which accompanies this letter.

*Yellow fever*.—There were 7 deaths less from this cause during the week than in the one before. I think it is too late in the season to fear an epidemic from this disease.

Since last report, the following-named ships have been visited and received bills of health from this office: April 10, barkentine *Josephine*, American, for Baltimore, Md.; April 13, steamship *Dalton*, British, for New Orleans; April 16, steamship *Moorish Prince*, British, for New York, and steamship *Mexican Prince*, British, for New York.

Respectfully, yours,

R. CLEARY, M. D.,  
Sanitary Inspector, M. H. S.

CUBA.

*Yellow Fever in Santiago during April, 1895.*

SANTIAGO DE CUBA, May 3, 1895.

SIR: I have the honor to inform you that I have received an official report from the sanitary board of this place, stating that the total number of deaths in this city from yellow fever during the last fifteen days of April was 11. The number of cases were unknown.

Very respectfully, your obedient servant,

PULASKI F. HYATT,  
United States Consul.

## JAPAN.

*Relative to the Introduction of Cholera into Japan.*

YOKOHAMA, JAPAN, April 19, 1895.

SIR: My last report was written March 19, and inclosed copies of telegrams announcing the occurrence of a few, chiefly isolated, cases of cholera at the Japanese ports in closest communication with the seat of war, viz, Ujina, Moji, etc., all in southern Japan, some 500 miles from Yokohama. Since the date mentioned, importations of cholera to the same region have been of frequent occurrence, scarcely a transport, a man of war, arriving either from Manchuria or the Pescadores without one or more cases of cholera on board. The very active measures taken by the authorities have, however, so far proved successful in controlling the spread of the disease, which has nowhere in Japan assumed epidemic form. There was, last night, a disquieting report that single cases have appeared in Matsugama, on the large island of Kiu-Siu, at some distance from the naval and military stations, and in the great central city of Osaka. The proof of the genuineness of these cases is, however, not yet complete.

The situation is, unquestionably, a grave one. Peace has been concluded by the plenipotentiaries, and, if ratified, will speedily be followed by the return of the armies and large bodies of coolies, employed in transportation, who, in dispersing to their homes, will almost inevitably distribute disease widely throughout the country.

The Government will bravely grapple with the danger, but conditions more favorable for the introduction and propagation of epidemic disease can scarcely be imagined.

Inspection of all vessels coming from suspected localities, domestic and foreign, to be followed, of course, by the necessary quarantine, where required, is already in force throughout Japan. In this connection I may say that a new quarantine station for Yokohama and Tokyo has just been completed at Nagahama, some 10 miles below this port, which, in completeness of equipment, convenience, and in its provision for the comfort and welfare of those detained for observation or treatment, is, probably unsurpassed in any country. The control of this station is vested in the hands of my English colleague, Dr. E. Wheeler, and myself, as senior health officer of the port of Yokohama, a large and competent staff assisting us.

After consultation with the consul-general, Mr. N. W. McIvor, it has been decided to enforce the most rigid inspection of all ships bound for the United States, the personal examination to include all on board, irrespective of class of passage, or of the points at which they have entered the ship.

Should any emergency occur warranting such action, I shall immediately cable you through the United States consul-general.

I remain, sir, very respectfully,

STUART ELDRIDGE, M. D.,  
Sanitary Inspector, U. S. M. H. S.

TURKEY.

*Cholera at Mecca, Arabia—Sanitary Report of Constantinople.*

[Report 121.]

CONSTANTINOPLE, April 24, 1895.

Cholera has broken out at Mecca. On the 22d instant the sanitary physician at Mecca wired that 6 cholera cases had been observed in the

holy city of Mecca. The first of the cases occurred in a woman, a pilgrim, who had arrived from the Cape of Good Hope. The second case occurred in a pilgrim who had arrived from Morocco, and the third cholera case occurred in a pilgrim who arrived from Soudan. The 3 other cases were observed among the soldiers in the military hospital. On the evening of the same day (22d instant), 2 cholera deaths were registered. It is neither astonishing nor extraordinary to see an epidemic of cholera in the Hejaz. Two years ago cholera broke out in the Hejaz on the day of Bairam, and nearly 50 per cent of the pilgrims became victims of cholera. Is it the revival of the same cholera of two years ago, or has it been brought from abroad, Camaran or Constantinople? That is the question which nobody can answer. From the day of the outbreak of cholera at Mecca until the next Bairam there are two months, during which time the pilgrims will continue to arrive, and may have cholera.

In order to prevent the eventual contamination of the pilgrims, it was decided at the last meeting of the International Sanitary Commission to propose to the Turkish Government to forbid the pilgrimage, as the French, Russian, and Persian Governments did some years ago. Up to this date there are only 25,000 pilgrims in the Hejaz, but more are arriving, and on the days of Bairam from 200,000 to 300,000 are thronged at Mecca. These pilgrims have to undergo their quarantine at Camaran, where, according to the medical reports, the soil is already cholera-infected, and the disinfection is difficult on account of lack of employees.

In the lazaretto of Camaran 85 cholera cases have been registered, of which 72 proved fatal.

In Constantinople, during the month of March, 1,338 deaths were registered, of which 60 are attributed to cholera and 97 to smallpox. Measles and typhoid fever are still raging. It is to be noticed that typhoid fever is caused by the bad condition of drains and sewers. There are also some cases of diphtheria.

SPIRIDION C. ZAVITZIANO.

#### STATISTICAL REPORTS.

**AFRICA—Mozambique.**—Year of 1894. Estimated population, 10,000. Total deaths, 196, including phthisis pulmonalis, 6; and measles, 3.

Month of January, 1895. Total deaths, 20, including 1 from phthisis pulmonalis.

**CUBA—Havana.**—Under dates of April 27, May 4, and May 11, 1895, the United States consul reports as follows:

There were 145 deaths in this city during the week ending April 25, 1895. One of those deaths was caused by yellow fever, with 3 new cases approximately; 2 were caused by enteric fever, 4 by so-called pernicious fever, 1 by paludal fever, 2 by diphtheria, 6 by enteritis, 3 by dysentery, 9 by smallpox, 1 by measles, 1 by the grippe, 9 by pneumonia, and 3 by glanders.

During the month of April, 1895, there were 575 deaths in this city. Six of those deaths were caused by yellow fever, 12 by enteric fever, 9 by so-called pernicious fever, 1 by paludal fever, 5 by diphtheria, 44 by enteritis, 4 by dysentery, 27 by smallpox, 2 by measles, 2 by the grippe, 21 by pneumonia, and 3 by glanders.

During the week ending May 2 there were 145 deaths, 1 of which was caused by yellow fever, with approximately 3 new cases, 4 were caused

by enteric fever, 3 by so-called pernicious fever, 1 by diphtheria, 19 by enteritis, 1 by dysentery, 7 by smallpox, and 2 by pneumonia.

There were 134 deaths in this city during the week ending May 9, 1895. One of those deaths was caused by yellow fever, with approximately 4 new cases, 3 were caused by so-called pernicious fever, 1 by diphtheria, 18 by enteritis, 4 by dysentery, 8 by smallpox, 6 by pneumonia, and 1 by cholera infantum.

**GREAT BRITAIN—*England and Wales.***—The deaths registered in 33 great towns of England and Wales during the week ended April 27 corresponded to an annual rate of 18.9 a thousand of the aggregate population, which is estimated at 10,591,530. The lowest rate was recorded in Croydon, viz, 10.4, and the highest in Bolton, viz, 29.3 a thousand.

***London.***—One thousand five hundred and eight deaths were registered during the week, including measles, 26; scarlet fever, 9; diphtheria, 27; whooping cough, 44; enteric fever, 5; and diarrhea and dysentery, 13. The deaths from all causes corresponded to an annual rate of 17.9 a thousand. In greater London, 1,916 deaths were registered, corresponding to an annual rate of 16.5 a thousand of the population. In the "outer ring" the deaths included 16 from diphtheria, 6 from measles, and 7 from whooping cough.

***Ireland.***—The average annual death rate represented by the deaths registered during the week ended April 27 in the 16 principal town districts of Ireland was 28.5 a thousand of the population. The lowest rate was recorded in Dundalk, viz, 12.6, and the highest in Sligo, viz, 55.8 a thousand. In Dublin and suburbs 181 deaths were registered, including smallpox, 1; enteric fever, 1; diphtheria, 1; and whooping cough, 1.

***Scotland.***—The deaths registered in 8 principal towns during the week ended April 27 corresponded to an annual rate of 20.6 a thousand of the population, which is estimated at 1,500,435. The lowest mortality was recorded in Greenock, viz, 15.1, and the highest in Leith, viz, 25.6 a thousand. The aggregate number of deaths registered from all causes was 594, including smallpox, 1; measles, 26; scarlet fever, 3; diphtheria, 3; and whooping cough, 24.

***Dundee.***—Month of March, 1895. Estimated population, 160,163. Total deaths, 386, including phthisis pulmonalis, 34; enteric fever, 1; measles, 5; diphtheria, 2; and whooping cough, 7.

**SPAIN—*Barcelona.***—Population, 318,000. Total deaths, 816, including smallpox, 16; phthisis pulmonalis, 100; enteric fever, 18; diphtheria, 21; and measles, 42.
