

ABSTRACT OF SANITARY REPORTS.

VOL. X.

WASHINGTON, D. C., MARCH 1, 1895.

No. 9.

TREASURY DEPARTMENT, *United States Marine-Hospital Service.*—Published in accordance with act of Congress approved February 15, 1893.

UNITED STATES.

[Reports to the Supervising Surgeon-General M. H. S.]

Smallpox at Hot Springs and Malvern, Ark.

LITTLE ROCK, ARK., *February 25, 1895.*

Outbreak of smallpox at Hot Springs, Ark. State board of health reports 11 cases up to Saturday. One case at Malvern, Ark.

L. P. GIBSON,
Acting Assistant Surgeon, M. H. S.

LITTLE ROCK, ARK., *February 26, 1895.*

Thirty-two cases of smallpox in pesthouse at Hot Springs; 3 cases in city limits; 2 cases at Malvern.

L. P. GIBSON,
Acting Assistant Surgeon, M. H. S.

One Case of Varioloid at Windsor Locks, Conn.

NEW HAVEN, CONN., *February 20, 1895.*

SIR: It becomes my duty to inform you that 1 case of varioloid exists at Windsor Locks, in the county of Hartford, in the State of Connecticut. The person sick is a Yale College student, a resident. The origin of the disease is unknown. The measures taken to restrict are thorough and vigilant, and the danger of the disease spreading is very little.

Very respectfully,

C. A. LINDSLEY,
Secretary State Board of Health.

Status of Smallpox in Indiana.

INDIANAPOLIS, IND., *February 22, 1895.*

SIR: Since my last report, February 9, 1895, I have to report the following cases of smallpox: One at Franklin in the family of the case

previously reported, 1 at Laporte and 1 at Whiting. Source of contagion, Chicago. The usual precautions have been taken.

Yours, truly,

C. A. METCALF,
Secretary State Board of Health.

Status of Smallpox in New Jersey.

TRENTON, N. J., *February 22, 1895.*

SIR: Replying to your inquiry of 20th instant, I would say that there are no cases of smallpox in Camden. There is 1 case in hospital at Snake Hill, Hudson County; also a convalescent case in Harrison. There is no smallpox at any other points in New Jersey.

Very respectfully,

HENRY MITCHELL,
Secretary State Board of Health,
Per DALLAS REEVE.

Two Additional Cases of Smallpox at Monroe, La.

SHREVEPORT, LA., *February 22, 1895.*

SIR: I have the honor to report the following dispatch received last night from Monroe:

Two new cases of smallpox developed in the Key House here last night, where the first case developed. These cases have been strictly quarantined in the house since the first case occurred.—T. O. BREWER, *President Board of Health.*

I wrote Dr. Brewer, requesting full data, etc., regarding these new cases, and expect his reply to-night. Should I receive it, will transmit in full with this.

I have great confidence in the ability of the health authorities in stamping out the disease. Since the discovery of the first case absolute nonintercourse between the occupants of the house, whom it was decided should remain therein, and all others has been maintained, with the sole exception of the physician in attendance. What means are adopted as to fumigation, etc., after the death of the first case, which occurred last Sunday, and what connection as to exposure, etc., the two new cases sustained to the first, I do not know.

As you did not state whether blanks and envelopes were sent Dr. T. O. Brewer for making weekly reports, and as I deemed it of importance, I assumed the responsibility of sending him a few from this office, requesting him to promptly inform you of whatever new developments appear, especially as to new cases, deaths, system of vaccination, its thoroughness, etc., as well as kind and extent of sanitary measures adopted, and by whom applied.

Very respectfully,

A. R. BOOTH,
Acting Assistant Surgeon, M. H. S.

Smallpox in New York State.

ALBANY, N. Y., *February 23, 1895.*

SIR: In response to your request for information relative to the existence at this date of smallpox in New York State, I have the honor to inform you that the only cases now existing are as follows: Brooklyn, N. Y., 1; New York City, 3; Utica, N. Y., 1; and Westchester, N. Y., 1.

Very respectfully, your obedient servant,

T. A. STUART,
Assistant Secretary State Board of Health.

*One Case of Smallpox at the United States Marine Hospital, Chicago, Ill.*CHICAGO, ILL., *February 24, 1895.*

SIR: I have the honor to report that Seaman Harry Daniels, of the steamer *City of Racine*, was admitted to this hospital February 20. He had been on shore since December 3, 1894, boarding on South Clark street. He had no knowledge of any exposure to smallpox, but was vaccinated by a private physician January 4, 1895. This was unsuccessful, and he was again vaccinated in the arm and in the leg about February 4, 1895; no result for two weeks, when the point in the leg became swollen and painful, and, having pain in the back and fever, he came to the dispensary, where he was examined, and sent to the hospital.

On admission, February 20, 1895, he had a large pustule (with yellow incrustations) about the size of a quarter of a dollar on his leg, and he was supposed to be suffering from vaccinia. The leg was enveloped with cloths wrung from an antiseptic solution, and antipyretics administered. The temperature increased, however, and the lumbar pain became more severe. On the 22d of February an eruption appeared on the forehead, face, and neck, and on the 23d it was vesicular. There being no longer any doubt as to the nature of his illness, the health commissioner of Chicago was notified; Inspector J. P. Letts responded, concurred in the diagnosis of smallpox, and the patient was removed to the city smallpox hospital.

As his mattress and bedding were presumably infected, they were allowed to go with the patient to the hospital. The weather is still cold, and the risk of removal was great. The retention of his bedding while on his long journey, about 9 miles, must have prevented him from suffering from exposure.

This case is the first reported in any sailor at this port, so far as I am aware, since the general vaccination of sailors by this service in April and May, 1894, notwithstanding its continued prevalence in the city, and it is obvious that he did not contract his disease while employed as a sailor. As he had not been vaccinated prior to December, 1894, it is apparent that he was not employed on any vessel sailing from this port at that time. The immunity enjoyed by the lake sailors this year is striking evidence to the value of the vaccination practiced last spring, and the evidence is not invalidated by the occurrence of this case under the circumstances as stated.

Very respectfully, yours,

JOHN B. HAMILTON,
*Surgeon, M. H. S.**Smallpox in Wisconsin.*MILWAUKEE, *February 25, 1895.*

SIR: I have the honor to report that the following concerning smallpox in this State has been received at this office during the week ending Saturday, February 23, 1895: Gibson Township, Manitowoc County, 1 death; Milwaukee, Milwaukee County, 8 cases. Cases on hand in Milwaukee at present time: In hospital, 10; in houses, 20; total, 30. One hospital closed.

Very truly, yours,

U. O. B. WINGATE,
*Secretary State Board of Health.**One Case of Smallpox at Newport News, Va.*NEWPORT NEWS, VA., *February 24, 1895.*

SIR: I have the honor to report the existence of a case of smallpox in

Newport News, Va. The local health authorities have isolated the case and taken proper precautions to prevent the spread of the disease.

Yours, very respectfully,

JOSEPH CHARLES,
Acting Assistant Surgeon, M. H. S.

Smallpox at Bluefields, W. Va.

MARTINSBURG, W. VA., February 21, 1895.

SIR: It becomes my duty to inform you that 1 case of smallpox exists at Bluefields, in the county of Mercer, this State, in the person of a resident. The origin of the disease is unknown. Measures taken: vaccination of exposed persons, etc.

Very respectfully,

N. D. BAKER,
Secretary State Board of Health.

Smallpox in the United States as reported to the Supervising Surgeon-General Marine-Hospital Service, January 1, 1895, to February 26, 1895.

Current Quarantine Measures.

[From the "Veröffentlichungen des Kaiserlichen Gesundheitsamtes," Berlin, January 25 and February 6, 1895.]

PRUSSIA—*Oppeln*.—The special regulations, Nos. 29, 39, 43, and 48, appended to the ordinances of July 25, September 28, October 24, and November 22, 1894, with regard to measures directed against travelers and their effects arriving from the cholera foci of Galicia, are suspended as regards the following named districts: Bohorodeczany, Brody, Brzcnny, Horodenka, Kalusz, Kolomea, Podhagee, Rohatyn, Sniatyn, Tlumacz, Zaleszczyki, and for the district of Kotzmann in Bukowina. The above named regulations shall remain in force for the districts of Bobrka, Borszczow, Buczacz, Husiatyn, Strumilowa, and Zloczow, and shall be held to apply to the districts of Skalat and Tarnopal in Galicia which have been declared cholera foci by the Austrian ministry of the interior.

The restrictive measures with regard to travel and traffic on the frontier were generally annulled in October and November of 1894. The prohibition of the issue of permits to carry on trade across the frontier went out of force November 2, with the proviso that such permits should not be issued to notorious smugglers or persons of bad character. The decree of July 25 ordering inspection at Brzczinka of vessels plying on the Przemsza went out of force November 19, 1894.

SPAIN.—By royal ordinance of January 17, 1895, quarantine against arrivals from St. Louis, Senegambia, is suspended.

ARGENTINA.—The decree of December 28, 1894, declaring the ports of Santa Fé, Rosario, and Colastine infected has been officially declared unauthorized.

BRAZIL.

Sanitary Report of Rio de Janeiro.

RIO DE JANEIRO, *January 22, 1895.*

SIR: Inclosed I have the honor to transmit report for week ended January 19, 1895. In this week there were 3 deaths from *accessio pernicioso*, being a decrease of 4; 4 from yellow fever, an increase of 1; 4 from smallpox, an increase of 3; 3 from enteric fever, an increase of 2;

1 from beriberi, none in the foregoing week ; and 2 from enteritis cholericiformis, which, I take it, means cholera. The total from all causes was 287, an increase over the preceding week of 66. This sudden increase may be due to the very hot and sultry weather, and though great, it is not as large a number as is usual at this season of the year.

Cholera.—This disease appears to be drawing to a close in the original localities, but is extending farther into the State of Minas Geraes, and down the Parahyba River to the north ; it is now in the neighborhood of Sao Fidelis, near its mouth. In this town there have been 4 suspected cases, which, as usual, were promptly sent to the hospital in Jurujuba Bay, besides 2 deaths from enteritis cholericiformis, which, I believe, means cholera. The authorities are very energetic, and intelligently apply proper disinfections, isolations, and removals in all suspected cases, and I believe it is in consequence of these measures that this town is not as yet afflicted with cholera. There is an emigrant station in the town of Juiz de Fora, in Minas Geraes, in which cholera has appeared, as is stated, because the State authorities refused to credit the existence of the disease on the railway line, and hence neglected ordinary precautions ; they are now active enough, and only 2 cases have appeared in the town outside the emigrant station, both fatal. The newspapers here almost daily note a few new cases in the Rio de la Plata, but nothing definite is known here. I have never known a summer here with so few cases of zymotic diseases as this one ; amongst the shipping there are none.

Since last report the following named ships have been inspected and received bills of health from this office : January 15, American bark *Amy*, for Baltimore, Md. ; January 16, American bark *White Wings*, for Baltimore, Md. ; January 18, American bark *D. Pedro II*, for Baltimore, Md. ; January 19, British steamship *Strabo*, for New York, N. Y., and British steamship *Imperial Prince*, for New York, N. Y. ; and January 21, British bark *Pellicano*, for Pascagonla, Miss.

Respectfully, yours,

R. CLEARY, M. D.,
Sanitary Inspector, M. H. S.

STATISTICAL REPORTS.

CUBA—*Havana.*—Under date of February 16, 1895, the United States sanitary inspector reports as follows :

There were 136 deaths in this city during the week ended February 14, 1895. One of those deaths was caused by yellow fever, with 3 new cases approximately ; 4 were caused by enteric fever, 4 by so-called pernicious fever, 1 by paludal fever, 1 by diphtheria, 5 by enteritis, 3 by dysentery, 6 by smallpox, 2 by the grippe, 4 by pneumonia, and 1 by the glanders.

FRANCE—*Roubaix.*—Month of January, 1895. Estimated population, 120,000. Total deaths, 196, including enteric fever, 5 ; diphtheria, 2 ; measles, 2 ; and whooping cough, 3.

GREAT BRITAIN—*England and Wales.*—The deaths registered in 33 great towns of England and Wales during the week ended February 9 corresponded to an annual rate of 20.7 a thousand of the aggregate population, which is estimated at 10,591,530. The lowest rate was recorded in Derby, viz, 13.5, and the highest in Liverpool, viz, 30.9 a thousand.

London.—One thousand seven hundred and sixty-eight deaths were registered during the week, including smallpox, 3; measles, 17; scarlet fever, 15; diphtheria, 34; whooping cough, 29; enteric fever, 13; and diarrhea and dysentery, 12. The deaths from all causes corresponded to an annual rate of 19.4 a thousand. In greater London 2,241 deaths were registered, corresponding to an annual rate of 19.3 a thousand of the population. In the "outer ring" the deaths included 7 from diphtheria and 5 from measles.

Ireland.—The average annual death rate represented by the deaths registered during the week ended February 9 in the 16 principal town districts of Ireland was 29.7 a thousand of the population. The lowest rate was recorded in Drogheda, viz, 4.4, and the highest in Galway, viz, 64.2 a thousand. In Dublin and suburbs 214 deaths were registered, including smallpox, 7; enteric fever, 4; scarlet fever, 1; and whooping cough, 5.

Scotland.—The deaths registered in 8 principal towns during the week ended February 9 corresponded to an annual rate of 26.2 a thousand of the population, which is estimated at 1,500,435. The lowest mortality was recorded in Dundee, viz, 17.5, and the highest in Glasgow, viz, 32.4 a thousand. The aggregate number of deaths registered from all causes was 757, including smallpox, 3; measles, 26; scarlet fever, 4; diphtheria, 7; and whooping cough, 27.

ST. HELENA.—Four weeks ended January 12, 1895. Estimated population, 3,877. Total deaths, 6, including 1 from diphtheria.
