

# Milk Sanitation Honor Roll for 1957-58

Seventy-one communities have been added to the Public Health Service milk sanitation "honor roll," and 41 communities on the previous list have been dropped. This revision covers the period from January 1, 1957, to December 31, 1958, and includes a total of 298 cities and 102 counties.

Communities on the honor roll have complied substantially with the various items of sanitation contained in the milk ordinance suggested by the U.S. Public Health Service. The State milk sanitation authorities concerned report this compliance to the Public Health Service. The rating of 90 percent or more, which is necessary for inclusion on the list, is computed from the weighted average of the percentages of compliance. Separate lists are compiled for communities in which all market milk sold is pasteurized, and for those in which both raw milk and pasteurized milk are sold.

The suggested milk ordinance, on which the milk sanitation ratings are based, is now in effect through

*This compilation is from the Division of Sanitary Engineering Services, Bureau of State Services, Public Health Service. The previous listing, with a summary of rules under which a community is included, was published in Public Health Reports, September 1958, pp. 861-864. The rating method was described in Public Health Reports 53: 1386 (1938); reprint No. 1970.*

voluntary adoption in 487 counties and 1,424 municipalities. The ordinance also serves as the basis for the regulations of 35 States and Hawaii. In 15 States and Hawaii it is in effect statewide.

The ratings do not represent a complete measure of safety, but they do indicate how closely a community's milk supply conforms with the standards for grade A milk as

stated in the suggested ordinance. High-grade pasteurized milk is safer than high-grade raw milk because of the added protection of pasteurization. The second list, therefore, shows the percentage of pasteurized milk sold in a community which also permits the sale of raw milk.

Although semiannual publication of the list is intended to encourage communities operating under the suggested ordinance to attain and maintain a high level of enforcement of its provisions, no comparison is intended with communities operating under other milk ordinances. Some communities might be deserving of inclusion, but they cannot be listed because no arrangements have been made for determination of their ratings by the State milk sanitation authority concerned. In other cases, the ratings which were submitted have lapsed because they are more than 2 years old. Still other communities, some of which may have high-grade milk supplies, have indicated no desire for rating or inclusion on this list.

## Communities awarded milk sanitation ratings of 90 percent or more, 1957-58

NOTE: In these communities the pasteurized market milk shows a 90 percent or more compliance with the grade A pasteurized milk requirements, and the raw market milk shows a 90 percent or more compliance with the grade A raw

milk requirements, of the milk ordinance suggested by the United States Public Health Service.

Notice particularly the percentage of the milk pasteurized in the various communities listed. This per-

centage is an important factor to consider in estimating the safety of a city's milk supply. All milk should be pasteurized, whether commercially or at home, before it is consumed.

# publications

---

**The Recognition of Lead Poisoning in the Child.** *PHS Publication No. 620; 1958; 8 pages; 10 cents.*

A clinical description of lead poisoning in children is presented in this pamphlet written for the practicing physician. Emphasizing the imperativeness of early diagnosis, it discusses incidence, etiology, symptoms, laboratory confirmation, and treatment.

A short bibliography is included.

**Vital Statistics of the United States, 1956. Volume I.** *NOVS Publication; 378 pages; \$4.*

Similar in coverage to the 1955 report, this volume carries introductory material; all statistics for Alaska, Hawaii, Puerto Rico, and the Virgin Islands (U.S.); and marriage, divorce, natality, fetal mortality, and infant mortality statistics for the United States and each State.

The introduction, which includes 73 tables, discusses sources of vital data, history of vital registration, classification and interpretation of vital data, life tables, and analysis of the mortality statistics already published in volume II.

**Recommended Dietary Allowances.** *NAS-NRC Publication No. 598; 1958; 36 pages; \$1.*

On the basis of the best current scientific evidence, the Food and Nutrition Board recommends levels of nutrient intake considered most likely to provide maintenance of good nutrition for healthy persons in the United States. The allowances are obtainable from multiple combinations of dietary patterns.

Recommendations are made for calories, protein, calcium, iron, vitamin A, thiamine, riboflavin, niacin, ascorbic acid, and vitamin D. Also considered are other nutrients for which human requirements are not quantitatively established, but which

are likely to be included in the dietary patterns.

Copies may be purchased from the Publications Office, National Academy of Sciences-National Research Council, 2101 Constitution Avenue, N.W., Washington 25, D.C.

**Tuberculosis Chart Series, 1958 Revision.** *PHS Publication No. 639; 1958; 44 pages; 35 cents.*

A comprehensive presentation of the statistical aspects of tuberculosis in the United States, this revision combines some of the related topics in the 1957 edition and brings the material up to date.

Discussion of the usefulness of BCG and selected information from special studies are also included.

**Organization and Staffing for Full-Time Local Health Services, December 31, 1956.** *PHS Publication No. 634; 1958; by Clifford H. Greve and Josephine R. Campbell; 52 pages; 35 cents.*

The organization and staffing of 1,425 full-time local health units are analyzed.

Tables and charts show extent of coverage of the Nation by full-time local health organizations, selected characteristics of organized areas, financial capacity of those areas and their expenditures for public health, and public health personnel employed by official health agencies and by other official agencies.

**The Industrial Environment: Its Evaluation and Control.** *Syllabus for short courses for industrial hygiene engineers and chemists presented at Occupational Health Field Headquarters, Cincinnati, Ohio. PHS Publication No. 614; 1958; 364 pages; \$2.75.*

Lecture outlines, extensive reference lists, and laboratory exercises have been assembled to provide guidance to engineers and chemists new to the field of occupational

health and to furnish a review of basic procedures and techniques for experienced workers. The material has been developed in short courses presented by the Public Health Service.

The syllabus deals primarily with fundamental principles and methods used in the evaluation and control of the working environment, with emphasis on sampling and analysis and engineering control measures. Inplant air contaminants, radiation, noise, illumination, and ventilation are among the major topics. No material is included on clinical, toxicological, or physiological aspects of occupational health hazards.

Complimentary copies are restricted to students participating in the courses, but sale copies are available.

**Sampling the Air. How air pollution is measured and studied.** *PHS Publication No. 642; 1958; 5 pages; 5 cents.* Defines air pollution and describes its obvious effects. Sketches background and growth of national air sampling network. Outlines sampling procedures and resultant observations.

**The Air We Live In. The health effects of air pollution.** *PHS Publication No. 640; 1958; 7 pages; single copies, 10 cents, \$5 per 100.* Warns against polluted air. Describes effects as nuisance and health menace, recalls episodes of mass illness and fatalities, and discusses research.
