

SUPPLEMENTARY FIGURE. Primary reason for non-receipt of influenza* vaccination or tetanus toxoid, reduced diphtheria toxoid, and acellular pertussis vaccine (Tdap)[†] reported by eligible pregnant women — Internet panel survey, United States, March–April 2019

* Primary reason for not receiving influenza vaccination among women pregnant any time during October 2018–January 2019 who did not report vaccination before or during pregnancy as of their survey date (n = 858). Excludes women who reported receiving vaccination after pregnancy (n = 68) and unvaccinated women who did not provide a reason for non-vaccination (n = 5).

[†] Primary reason for not receiving Tdap among recently pregnant women who reported a live birth by the time of the survey and did not report vaccination during their most recent pregnancy (n = 345). Excludes unvaccinated women who did not provide a reason for non-vaccination (n = 11).
