# Outline

- Hepatitis B Supply Update
  - Pediatric
  - Adult
- CDC Vaccine Supply/Shortage Page

# Pediatric Hepatitis B Vaccine

- Merck's anticipates continuing to have a limited supply of pediatric hepatitis B vaccines throughout mid 2020 and will continue to direct its limited supply to CDC to support utilization consistent with current clinical guidance.
- GSK is able to continue to cover the supply gap during this time period, using a combination of monovalent and combination vaccine; however, preference for a specific presentation (i.e., vial versus syringe) may not be met uniformly during this time.
  - Expected monovalent supply remains sufficient to cover the birth dose for all children as well as some second and third doses

# Adult Hepatitis B Vaccine

- With the exception of a limited release of vaccine available in the fall of 2019, Merck will not be distributing its adult hepatitis B vaccine or dialysis formulation through 2020.
- Dynavax and GSK have sufficient supply of adult hepatitis B vaccine to address the anticipated gap in Merck's adult hepatitis B vaccine supply during this period; however, preference for a specific presentation (i.e., vial versus syringe) may not be met uniformly during this time.
