

SUPPLEMENTARY TABLE 1. Estimated population of adults* aged 55–80 years who met[†] and did not meet[§] US Preventive Services Task Force lung cancer screening criteria, by pack-years, and estimated population of never-smokers aged 55–80 years — 10 states, Behavioral Risk Factor Surveillance System, 2017**

State	Total adults aged 55–80 years		Estimated smokers aged 55–80 years who met USPSTF criteria			Estimated smokers aged 55–80 years who did not meet USPSTF criteria						Estimated population of never smokers
	N	Estimated population	Current ≥30 PY smokers	Former	Total who met USPSTF criteria	Current 20–29 PY smokers	Current <20 PY smokers	Former ≥30 PY			Total who did not meet USPSTF criteria	
				smokers, quit <15y				smokers, quit ≥15y	Former 20–29 PY smokers	Former <20 PY smokers		
Florida	7,936	4,705,800	336,900	273,100	610,000	162,000	175,700	176,000	209,300	820,600	1,543,600	2,552,100

Abbreviations: N = unweighted number of respondents; population estimate = weighted number of respondents (rounded to nearest 100); PY = pack-years; USPSTF = US Preventive Services Task Force.

* Respondents were excluded if missing age, smoking status, pack-year information, or if history of prior cancer diagnosis.

[†] Met USPSTF lung cancer screening criteria = adults aged 55–80 years with ≥30 pack-year cigarette smoking history and currently smoke or have quit <15 years ago.

[§] Did not meet USPSTF lung cancer screening criteria = adults aged 55–80 years who smoked cigarettes but had <30 pack-year smoking history or had quit ≥15 years ago, or who were never smokers.

[¶] The average of number of 20-cigarette packs smoked per day multiplied by the number of years smoked.

** Weighted total population was not estimated for the combined 10 states.
