Measles Cases and Outbreaks

CDC updates this page monthly.

Measles Cases in 2020

As of March 2, 2020, there have been 12 confirmed cases in 7 jurisdictions.*

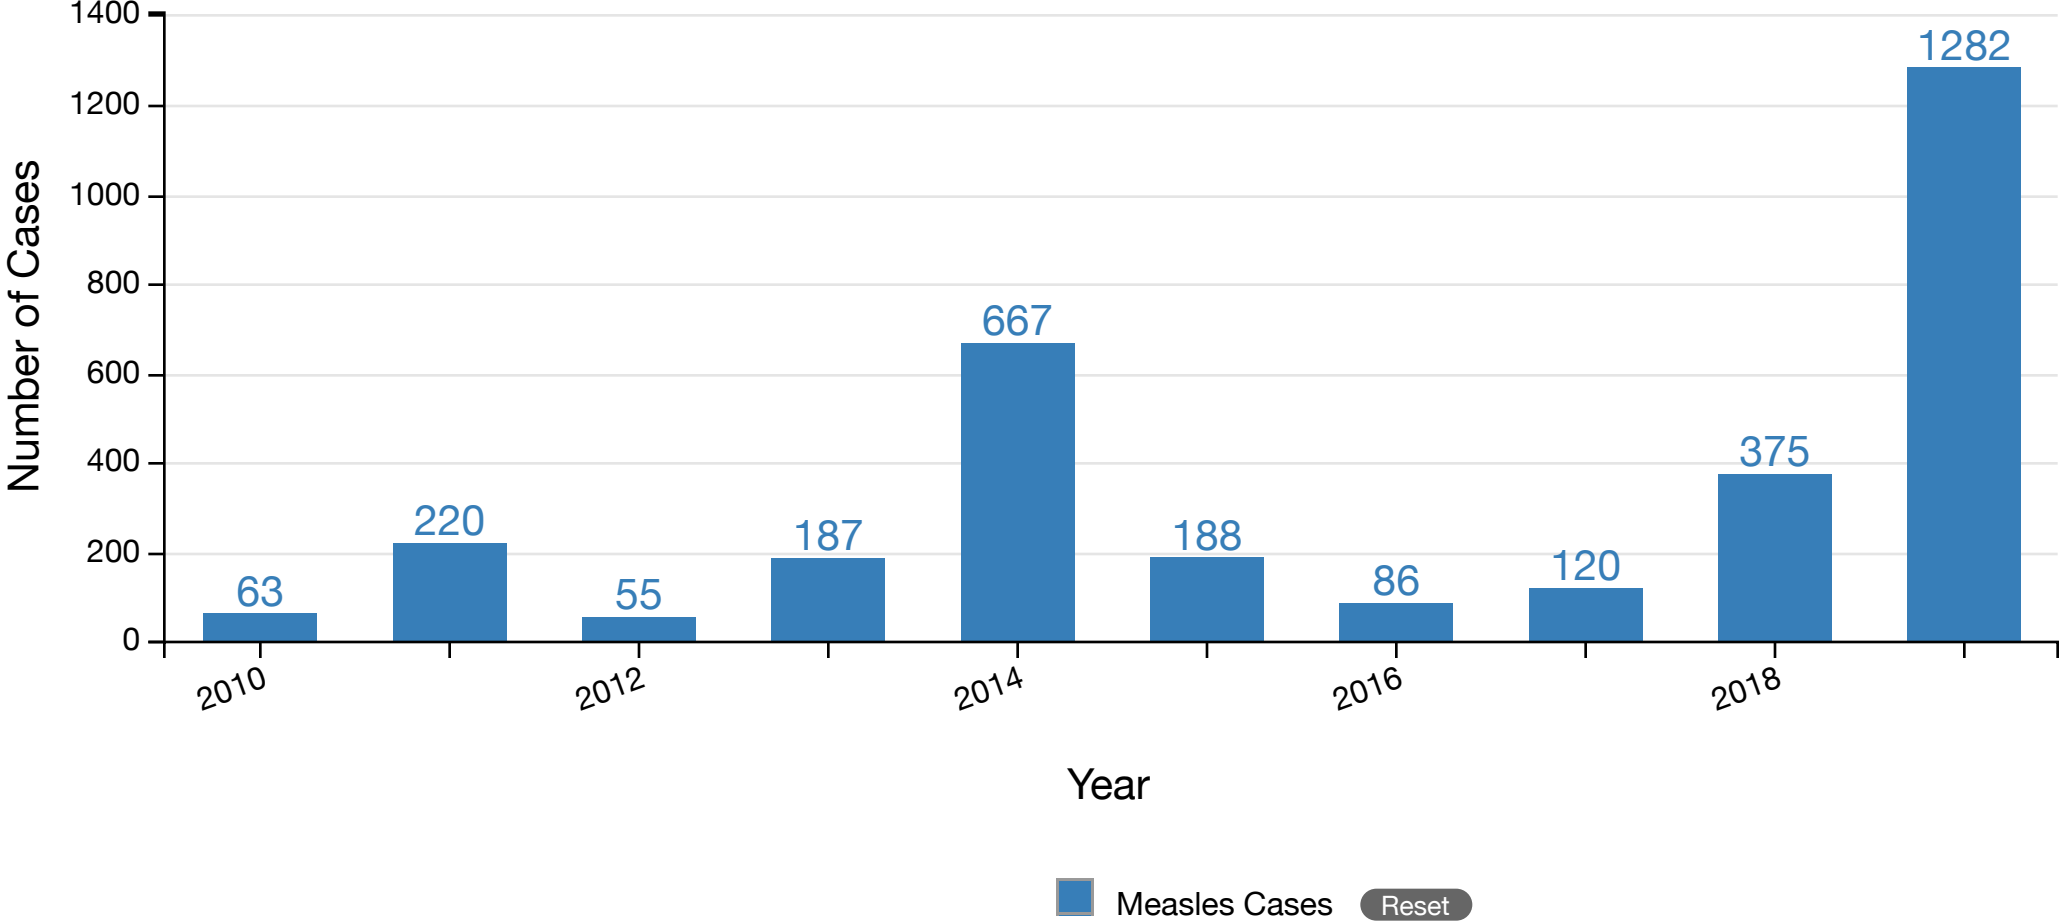

*Jurisdictions refer to any of the 50 states, New York City, and the District of Columbia.

Measles Cases in 2019

- From January 1 to December 31, 2019, 1,282* individual cases of measles were confirmed in 31 states. Of these cases, 128 were hospitalized and 61 reported having complications, including pneumonia and encephalitis.
- This is the greatest number of cases reported in the U.S. since 1992. More than 73% of the cases were linked to recent outbreaks in New York. The majority of cases were among people who were not vaccinated against measles. Measles is more likely to spread and cause outbreaks in U.S. communities where groups of people are unvaccinated.
- All measles cases were caused by measles wild-type D8 or B3.

Number of Measles Cases Reported by Year

2010-2019*(as of January 31, 2019)

Data Table

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
Measles Cases	63	220	55	187	667	188	86	120	375	1282

*Reporting for 2019 began December 30, 2018. Case count is preliminary and subject to change.

Make sure you are vaccinated against measles before traveling internationally.

Spread of Measles

- The majority of people who got measles were unvaccinated.
- Measles is still common in many parts of the world.
- Travelers with measles continue to bring the disease into the U.S.
- Measles can spread when it reaches a community in the U.S. where groups of people are unvaccinated.

Measles Outbreaks

In a given year, more measles cases can occur for any of the following reasons:

- an **increase in the number of travelers who get measles abroad** and bring it into the U.S., and/or
- further spread of measles in U.S. **communities with pockets of unvaccinated people.**

2018

The U.S. experienced 17 outbreaks in 2018. Three outbreaks in New York State, New York City, and New Jersey, respectively, contributed to most of the cases. Cases in those states occurred primarily among unvaccinated people in Orthodox Jewish communities. These outbreaks were associated with travelers who brought measles back from Israel, where a large outbreak is occurring. Eighty-two people brought measles to the U.S. from other countries in 2018.

2017

A 75-case outbreak was reported in Minnesota in a Somali-American community with poor vaccination coverage.

MMWR. September 30, 2016

On April 15, 2016, local public health officials in Shelby County, Tennessee, were notified of a positive measles immunoglobulin M (IgM) test for a male aged 18 months...

The United States experienced a large (147 cases), multi-state measles outbreak linked to an amusement park in California. The outbreak likely started from a traveler who became infected overseas with measles, then visited the amusement park while infectious; however, no source was identified. Analysis by CDC scientists showed that the measles virus type in this outbreak (B3) was identical to the virus type that caused the large measles outbreak in the Philippines in 2014.

MMWR: 2015 Outbreaks

- [Measles — United States, January 4–April 2, 2015](#)

MMWR. April 17, 2015

From January 1 through April 2, 2015, a total of 159 measles cases have been reported to CDC....

MMWR. Vol 62, No 36;753

In 2011, more than 30 countries in the WHO European Region reported an increase in measles, and France was experiencing a large outbreak. These led to a large number of importations (80) that year. Most of the cases that were brought to the U.S. in 2011 came from France. For more information see [Measles — United States, January–May 20, 2011](#).
