## Cases in U.S.

Other Languages

Updated April 16, 2020

**This page will be updated daily. Numbers close out at 4 p.m. the day before reporting.**

\*\*\*On Saturday and Sunday, the numbers in [COVID-19: U.S. at a Glance](#) will be updated. These numbers are preliminary and have not been confirmed by state and territorial health departments. CDC will update weekend numbers the following Monday to reflect health department updates.\*\*\*

**New Data Available:** Demographic characteristics of COVID-19 cases in the United States

### COVID-19: U.S. at a Glance\*†

- **Total cases: 632,548** (632,220 confirmed; 348 probable)
- **Total deaths: 31,071** (26,930 confirmed; 4,141 probable)
- **Jurisdictions reporting cases: 55** (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19. A probable case or death is defined by i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

† Numbers updated Saturday and Sunday are not confirmed by state and territorial health departments. These numbers will be modified when numbers are updated on Monday.

### States Reporting Cases of COVID-19 to CDC\*

Note: On April 16, 2020, CDC updated the map legend to more accurately reflect current case counts.

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19. A probable case or death is defined by i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

\*Self-reported by health department characterizing the level of community transmission in their jurisdiction as: "Yes, widespread" (defined as: widespread community transmission across several geographical areas); "Yes, defined area(s)" (defined as: distinct clusters of cases in a, or a few, defined geographical area(s)); "Undetermined" (defined as: 1 or more cases but not classified as "Yes" to community transmission); or "N/A" (defined as: no cases).

<b>White</b>	926 (65%)	20,734 (63%)	23,920 (61%)	8,983 (62%)	13,770 (74%)	3,303 (74%)	71,636 (64%)
<b>Multiple/other</b>	13 (0.9%)	128 (0.4%)	108 (0.3%)	33 (0.2%)	30 (0.2%)	4 (0.1%)	316 (0.3%)
<b>Ethnicity missing/unspecified</b>	6,735 (82%)	136,515 (81%)	135,661 (79%)	38,027 (75%)	38,629 (73%)	7,449 (56%)	363,016 (78%)
<b>Ethnicity specified</b>	1,436 (18%)	32,215 (19%)	36,463 (21%)	12,489 (25%)	14,617 (27%)	5,759 (44%)	102,979 (22%)
<b>Among those with ethnicity specified</b>							
<b>Hispanic/Latino</b>	450 (31%)	7,725 (24%)	6,586 (18%)	1,405 (11%)	1,140 (8%)	687 (12%)	17,993 (16%)
<b>Non-Hispanic/Latino</b>	986 (69%)	24,490 (76%)	29,877 (82%)	11,084 (89%)	13,477 (92%)	5,072 (88%)	84,986 (83%)

\*Case notifications were received by CDC from U.S. public health jurisdictions and the National Notifiable Diseases Surveillance System (NNDS).

## Cumulative total number of COVID-19 cases in the United States by report date, January 12, 2020 to April 15, 2020, at 4pm ET (n=632,548)\*†

Scroll for additional info

\* Does not include cases among persons repatriated to the United States from Wuhan, China and Japan.

† Numbers updated Saturday and Sunday are not confirmed by state and territorial health departments. These numbers may be updated when the official numbers are provided on Monday.

## COVID-19 cases in the United States by date of illness onset, January 12, 2020, to April 15, 2020, at 4pm ET (n=349,303)\*

Scroll for additional info

Region Name	Start Date	End Date
<b>Illnesses that began during this time may not yet be reported**</b>	04/05/2020	04/15/2020

\* Does not include cases among persons repatriated to the United States from Wuhan, China and Japan, or U.S.-identified cases where the date of illness onset or specimen collection date has not yet been reported. Date is calculated as illness onset date if known. If not, an estimated illness onset date was calculated using specimen collection date.

Note: On March 24, CDC updated the data included in this figure to include estimated illness onset date.

### Cases of COVID-19 Reported in the US, by Source of Exposure\*†

Travel-related	6,814
Close contact	14,728
Under investigation	611,006
<b>Total cases</b>	<b>632,548</b>

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19. A probable case or death is defined by i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

† CDC is no longer reporting the number of persons under investigation (PIUs) that have been tested, as well as PIUs that have tested negative. Now that states are testing and reporting their own results, CDC's numbers are not representative of all testing being done nationwide.
