

Coronavirus Disease 2019 (COVID-19)

Testing Data in the U.S.

Updated May 25, 2020

TOTAL TESTS REPORTED

14,131,277

POSITIVE TESTS REPORTED

1,806,963

% OF POSITIVE TESTS

13%

Tests for COVID-19

- Viral tests tell you if you currently have an infection with SARS-CoV-2, the virus that causes COVID-19. A positive test result means you have an infection.
 - For more information on viral tests for COVID-19, see our [Viral Testing page](#).
- Antibody blood tests, also called antibody tests, check your blood by looking for antibodies, which show if you had a previous infection with the virus.
 - For more information on antibody tests for COVID-19, see our [Antibody Testing page](#).

About the Data

- These data are compiled from a number of sources. Not all tests are reported to CDC.
- The number of positive tests in a state is not equal to the number of cases, as one person may be tested more than once.

CDC has moved the following information to the [Previous U.S. Testing Data](#).

- Public Health Laboratory Testing for COVID-19,
- Number of specimens tested for SARS CoV-2 by CDC labs and U.S. public health laboratories
