Coronavirus Disease 2019 (COVID-19)

WEAR A MASK. PROTECT OTHERS.

Testing Data in the U.S.

Updated August 1, 2020

Print

TOTAL TESTS REPORTED	POSITIVE TESTS REPORTED	% OF POSITIVE TESTS
52,942,145	5,046,506	10%

Tests for COVID-19

- Viral tests tell you if you currently have an infection with SARS-CoV-2, the virus that causes COVID-19. A positive test result means you have an infection.
    - For more information on viral tests for COVID-19, see our Viral Testing page.
- Antibody blood tests, also called antibody tests, check your blood by looking for antibodies, which show if you had a previous infection with the virus.
    - For more information on antibody tests for COVID-19, see our Antibody Testing page.

CDC COVID Data Tracker

About the Data

- These data are compiled from a number of sources. Not all tests are reported to CDC.
- The number of positive tests in a state is not equal to the number of cases, as one person may be tested more than once.

CDC has moved the following information to the Previous U.S. Testing Data.

- Public Health Laboratory Testing for COVID-19,
- Number of specimens tested for SARS CoV-2 by CDC labs and U.S. public health laboratories
