# Demographic Trends of COVID-19 cases and deaths in the US reported to CDC 

$\overline{C D C}$ is working with states to provide more information on race/ethnicity for reported cases. The percent of reported cases that include race/ethnicity data is increasing.
These data only represent the geographic areas that contributed data on race/ethnicity. Every geographic area has a different racial and ethnic composition. These data are not generalizable to the entire U.S. population.

If cases were distributed equally across racial and ethnic populations, one would expect to see more cases in those populations that are more highly represented in geographic areas that contributed data.

Percentages displayed in the charts below represent the percent of cases or deaths for which the demographic variable of interest is known.
CDC | Updated: Aug 112020 3:01PM

Cases by Race/Ethnicity:
Data from 3,776,252 cases. Race/Ethnicity was available for 1,806,573 (48\%) cases.

Cases by Age Group:
Data from 3,776,252 cases. Age group was available for 3,626,657 (96\%) cases.

Deaths by Race/Ethnicity: Data from 123,382 deaths. Race/Ethnicity was available for 102,497 (83\%) deaths.

Deaths by Age Group:
Data from 123,382 deaths. Age group was available for 123,368 (99\%) deaths.

Cases by Sex:
Data from 3,776,252 cases. Sex was available for田 $\downarrow$ 3,681,968 (97\%) cases.

Deaths by Sex:
Data from 123,382 deaths. Sex was available for田 $\stackrel{\downarrow}{\downarrow}$ 122,570 (99\%) deaths.
