

Supplemental Material: Results Figures

Figure S1: The percentage of participants in the ILI and DSE groups who achieved different categorical weight losses from randomization to 2 years after EOI. The percentages are cumulative such that the 12% of ILI participants, for example, who lost $\geq 5\%$ includes the 6% who lost $\geq 10\%$. ILI = intensive lifestyle intervention; DSE = diabetes support and education.

Figure S1.
