# Coronavirus Disease 2019 (COVID-19)

# Testing Data in the U.S.

Updated August 21, 2020 [Print](#)

TOTAL TESTS  
REPORTED  
**74,830,464**

POSITIVE TESTS  
REPORTED  
**6,633,163**

% OF POSITIVE  
TESTS  
**9 %**

## Tests for COVID-19

- Viral tests tell you if you currently have an infection with SARS-CoV-2, the virus that causes COVID-19. A positive test result means you have an infection.
  - For more information on viral tests for COVID-19, see our [Viral Testing page](#).
- Antibody blood tests, also called antibody tests, check your blood by looking for antibodies, which show if you had a previous infection with the virus.
  - For more information on antibody tests for COVID-19, see our [Antibody Testing page](#).

## About the Data

- These data are compiled from a number of sources. Not all tests are reported to CDC.
- The number of positive tests in a state is not equal to the number of cases, as one person may be tested more than once.

CDC has moved the following information to the [Previous U.S. Testing Data](#).

- Public Health Laboratory Testing for COVID-19,
- Number of specimens tested for SARS CoV-2 by CDC labs and U.S. public health laboratories
