## eCR Now: COVID-19 Electronic Case Reporting

Improve public health action with real-time data flow

Updated Aug. 28, 2020

[Print](#)

**Electronic Case Reporting (eCR)** is the automated generation and transmission of case reports from the electronic health record (EHR) to public health agencies for review and action. eCR makes disease reporting from healthcare to public health faster and easier.

**eCR Now** is a strategic initiative that allows for rapid adoption and implementation of eCR for COVID-19. It improves COVID-19 reporting immediately, allows expansion to all reportable conditions, and features three components that make it easy to implement:

1. Rapid eCR implementation through small cohort groups for provider sites that use an electronic health record (EHR) with eCR capabilities
2. eCR Now Fast Healthcare Interoperability Resources (FHIR) app that non-eCR enabled EHRs can rapidly implement to automate eCR for COVID-19
3. Extension of the existing eHealth Exchange policy framework through an approved Carequality eCR implementation guide

### eCR's Value

- Enables bi-directional data exchange between healthcare providers and public health
- Provides immediate feedback from public health to healthcare about reportable conditions and possible outbreaks
- Reduces burden of manual reporting on healthcare facilities and providers and entry of information on public health agencies
- Improves completeness of reporting, including demographics that allows for expedited case investigation and contact tracing

## Public Health Agencies

- eCR provides more complete data from the electronic initial case report for a better public health response
- Reduces response time with automated information during outbreaks and public health emergencies
- Improves communication and collaboration with healthcare providers
- Shares relevant information with healthcare providers
- Monitors the spread of reportable conditions like COVID-19

## Healthcare Providers

- eCR reduces burden on healthcare professionals, staff, and facilities without disrupting the clinical workflow
- Fulfills legal reporting requirements
- Streamlines reporting challenges with jurisdictions
- Connects in real-time with your public health agency
- Offers credit for the CMS Promoting Interoperability Program for implementing eCR
- Improves COVID-19 reporting immediately and allows expansion to all reportable conditions

## eCR Is Easy to Implement

### Public Health Agencies

- ✓ Ensure your agency is connected to AIMS, the [APHL Informatics Messaging Services Platform](#)
- ✓ Enter your jurisdiction's reporting criteria for reportable conditions into the Reportable Condition Knowledge Management System (RCKMS)
- ✓ Engage with local healthcare organizations that are ready to implement eCR now

### Healthcare Providers

- ✓ Email [ecr@cdc.gov](mailto:ecr@cdc.gov) for information to onboard for eCR Now
- ✓ Contact your EHR vendor about implementing eCR now
- ✓ Learn details about implementing [eCR for COVID-19](#)
- ✓ Obtain necessary approval from organizational leadership and implement eCR now
