Cases	Deaths

Raw Totals	Rates per 100K

New	**Cumulative**

Linear	Logarithmic

Number of days since 100 Total Confirmed Cases first recorded

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. Case and death data are charted from date of first case/death rather than calendar date. The numbers are confirmed and probable COVID-19 cases as reported by U.S. states and U.S. territories. When not available to CDC, this is annotated by N/A.

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days per state, and the rate (cases/100,000) per state. The 7-day moving average of new cases (current day + 6 preceding days / 7) was calculated to smooth expected variations in daily counts.

Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
