

TABLE 1. Number, percentage, rate,* and ratio† of reported abortions — selected reporting areas, United States, 2008–2017

Year	Selected reporting areas [§]	Continuously reporting areas [†]		
	No.	No. (%)**	Rate	Ratio
2008	825,564	823,011 (99.7)	15.6	229
2009	789,217 ^{††}	786,621 (99.7)	14.9	224
2010	765,651	762,755 (99.6)	14.4	225
2011	730,322	727,554 (99.6)	13.7	217
2012	699,202	696,587 (99.6)	13.1	208
2013	664,435	661,874 (99.6)	12.4	198
2014	652,639	649,849 (99.6)	12.1	192
2015	638,169	636,902 (99.8)	11.8	188
2016	623,471	623,471 (100.0)	11.6	186
2017	612,719	609,095 (99.4)	11.2	185

* Number of abortions per 1,000 women aged 15–44 years.

† Number of abortions per 1,000 live births.

§ For each given year, excludes reporting areas that did not report that year’s abortion numbers to CDC: California (2008–2017), District of Columbia (2016), Maryland (2008–2017), and New Hampshire (2008–2017).

† For all years, excludes reporting areas that did not report abortion numbers every year during the period of analysis (2008–2017): California, District of Columbia, Maryland, and New Hampshire.

** Abortions from areas that reported every year during 2008–2017 as a percentage of all reported abortions for a given year.

†† This number is greater than reported in the 2009 report because of numbers subsequently provided by Delaware (**Source:** Pazol K, Creanga AA, Zane SB, Burley KD, Jamieson DJ. Abortion surveillance—United States, 2009. MMWR Surveill Summ 2012;61[No. SS-8]).

TABLE 2. Number, rate,* and ratio† of reported abortions, by reporting area of occurrence and percentage of abortions obtained by out-of-state residents§ — United States, 2017¶

State/Area	Abortions reported by area of occurrence**			Abortions obtained by out-of-state residents
	No.	Rate	Ratio	No. (%)

Total	612,719	NA	NA	NA

Abbreviation: NA = not applicable

* Number of abortions per 1,000 women aged 15–44 years.

† Number of abortions per 1,000 live births.

§ Additional details on the reporting area in which abortions were provided, cross-tabulated by the state of residence, are available at https://www.cdc.gov/reproductivehealth/data_stats/Abortion.htm.

¶ Data from 48 reporting areas; excludes four reporting areas (California, Maryland, New Hampshire, and Wyoming) that did not report or did not meet reporting standards.

** The total abortions include those with known and unknown residence status.

** Reporting to the central health agency is not required.

§§ Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.

- * Data from 48 reporting areas; excludes four reporting areas (California, Maryland, New Hampshire, and Wyoming) that did not report, did not report by age, or did not meet reporting standards.
- † Percentages for the individual component categories might not add to 100% because of rounding.
- § Percentage is calculated as the number of abortions reported by known age divided by the sum of abortions reported by known and unknown age. Values $\geq 99.95\%$ are rounded to 100.0%.
- ¶ Cells with a value in the range of 1–4 or cells that would allow for calculation of these small values have been suppressed.
- ** Reporting to the central health agency is not required.
- †† Includes residents only.
- §§ Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.
- ¶¶ Percentage based on a total of 606,044 abortions reported among the areas that met reporting standards for age.
- *** Number of abortions obtained by women in a given age group per 1,000 women in that same age group. Adolescents aged 13–14 years were used as the denominator for the group of adolescents aged <15 years, and women aged 40–44 years were used as the denominator for the group of women aged ≥ 40 years. For the total abortion rate only, abortions for women of unknown age were distributed according to the distribution of abortions among women of known age.
- ††† Number of abortions obtained by women in a given age group per 1,000 live births to women in that same age group. For the total abortion ratio only, abortions for women of unknown age were distributed according to the distribution of abortions among women of known age.

* Data from 44 reporting areas, excludes eight reporting areas (California, District of Columbia, Florida, Maine, Maryland, New Hampshire, Vermont, and Wyoming) that did not report, did not report by age, or did not meet reporting standards for ≥1 year. By year, these reporting areas represent 87%-99% of all abortions reported by age to CDC during 2008–2017.

[†] Number of abortions obtained by women in a given age group per 1,000 women in that same age group. Adolescents aged 13–14 years were used as the denominator for the group of adolescents aged <15 years, and women aged 40–44 years were used as the denominator for the group of women aged ≥40 years. Women aged 15–44 years were used as the denominator for the overall rate. For the total abortion rate only, abortions for women of unknown age were distributed according to the distribution of abortions among women of known age.

[§] Number of abortions obtained by women in a given age group per 1,000 live births to women in that same age group. For the total abortion ratio only, abortions for women of unknown age were distributed according to the distribution of abortions among women of known age.

TABLE 5. Reported abortions, by known race/ethnicity and reporting area of occurrence — selected reporting areas,* United States, 2017

State/Area	Non-Hispanic			Hispanic	Total abortions reported by known race/ethnicity
	White	Black	Other		No. (% of all reported abortions) [§]

Abortion rate^{***}	7.1	24.8	12.7	12.3	—
Abortion ratio^{††††}	122	393	218	177	—

* Data from 36 reporting areas; excludes 16 reporting areas (California, Illinois, Iowa, Louisiana, Maine, Maryland, Massachusetts, Nebraska, New Hampshire, New Mexico, North Dakota, Oklahoma, Pennsylvania, Rhode Island, Wisconsin, and Wyoming) that did not report, did not report by race/ethnicity, or did not meet reporting standards.

[†] Percentages for the individual component categories might not add to 100% because of rounding.

[§] Percentage is calculated as the number of abortions reported by known race/ethnicity divided by the sum of abortions reported by known and unknown race/ethnicity. Values ≥99.95% are rounded to 100.0%.

[‡] Reporting to the central health agency is not required.

**Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.

^{††} Reporting form contains only one question for race/ethnicity; therefore, abortions reported for women of White, Black, and other races (Asian and Native American) are not explicitly identified as non-Hispanic.

^{§§} Cells with a value in the range of 1–4 or cells that would allow for calculation of these small values have been suppressed.

^{†††} Percentage is based on a total of 490,448 abortions reported among the areas that met reporting standards for race/ethnicity.

^{***} Number of abortions obtained by women in a given racial/ethnic group per 1,000 women in that same racial/ethnic group. For the total abortion rate only, abortions for women of unknown race/ethnicity were distributed according to the distribution of abortions among women of known race/ethnicity.

^{††††} Number of abortions obtained by women in a given racial/ethnic group per 1,000 live births to women in that same racial/ethnic group. For the total abortion ratio only, abortions for women of unknown race/ethnicity were distributed according to the distribution of abortions among women of known race/ethnicity.

TABLE 6. Reported abortions, by known marital status and reporting area of occurrence — selected reporting areas,* United States, 2017

State/Area	Marital status		Total abortions reported by known marital status No. (% of all reported abortions) [§]

* Data from 44 reporting areas; excludes eight areas (California, District of Columbia, Illinois, Maryland, New Hampshire, New York State, Wisconsin, and Wyoming) that did not report, did not report by number of previous live births, or did not meet reporting standards.

[†] Percentages for the individual component categories might not add to 100% because of rounding.

[§] Percentage is calculated as the number of abortions reported by known number of previous live births, divided by the sum of abortions reported by known and unknown number of previous live births. Values ≥99.95% are rounded to 100.0%.

[†] Recorded as the number of previous pregnancies carried to term.

** Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.

^{††} Percentage is based on a total of 535,373 abortions reported among the areas that met reporting standards for the number of previous live births.

* Gestational age based on the clinician's estimate (Alabama, Alaska, Arizona, Connecticut, Colorado, Delaware, Florida, Georgia, Hawaii, Idaho, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York City, North Carolina, North Dakota, Ohio, Oregon, Rhode Island, South Dakota, Tennessee, Vermont, Washington, and West Virginia); gestational age calculated from the last normal menstrual period (Oklahoma and Utah); clinician's estimate of gestation based on estimated date of conception (Virginia); probable postfertilization age (Arkansas and Texas); clinical estimate for a portion of the year and probable postfertilization age for a portion of the year (South Carolina).

† Data from 42 reporting areas; excludes 10 areas (California, District of Columbia, Illinois, Maryland, Massachusetts, New Hampshire, New York State, Pennsylvania, Wisconsin, and Wyoming) that did not report, did not report by gestational age, or did not meet reporting standards.

§ Percentages for the individual component categories might not add to 100% because of rounding.

[¶] Percentage is calculated as the number of abortions reported by known gestational age divided by the sum of abortions reported by known and unknown gestational age. Values $\geq 99.95\%$ are rounded to 100.0%.

^{**} Two weeks were added to the probable postfertilization age to provide a corresponding measure to gestational age based on the clinician's estimate.

^{††} Cells with a value in the range of 1–4 or cells that would allow for calculation of these small values have been suppressed.

^{§§} Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.

^{¶¶} Percentage based on a total of 487,077 abortions reported among the areas that met reporting standards for gestational age.

TABLE 10. Reported abortions, by known weeks of gestation and year — selected reporting areas,* United States, 2008–2017

Weeks of gestation	Year										% change			
	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2008 to 2012	2013 to 2017	2016 to 2017	2008 to 2017

Total	300,116 (55.4)	44,057 (8.1)	—****	190,833 (35.3)	6,124 (1.1)	—††††	130 (0.0)	79 (0.0)	541,339 (98.5)§§§§

Abbreviation: NA = not available.

* Data from 44 reporting areas; excludes eight reporting areas (California, Illinois, Louisiana, Maryland, New Hampshire, New Mexico, Tennessee, and Wyoming) that did not report, did not report by method type, or did not meet reporting standards. Areas reporting by method type with unknown gestational age are included.

[†] Includes aspiration curettage, suction curettage, manual vacuum aspiration, menstrual extraction, sharp curettage, and dilation and evacuation procedures.

[§] Intrauterine instillations reported at ≤ 12 weeks' gestation were considered as unknown for method type.

[¶] Percentages for the individual component categories might not add to 100% because of rounding.

^{**} Percentage is calculated as the number of abortions reported by known method type divided by the sum of abortions reported by known and unknown method type. Values $\geq 99.95\%$ are rounded to 100.0%.

^{††} Cells with a value in the range of 1–4 or cells that would allow for calculation of these small values have been suppressed.

^{§§} Two weeks were added to the probable postfertilization age to provide a corresponding measure to gestational age based on the clinician's estimate.

^{¶¶} Reporting to the central health agency is not required.

^{***} Numbers for surgical procedures at ≤ 13 weeks versus > 13 weeks and for medical abortions at ≤ 9 weeks versus > 9 weeks are not presented because gestational age data were not provided by method type.

^{†††} Reporting to the central health agency is not required. Data are requested from hospitals and licensed ambulatory care facilities only.

^{§§§} Gestational age reported in this table as ≤ 9 weeks includes ≤ 8 weeks; > 9 weeks includes ≥ 9 weeks; ≤ 13 weeks includes ≤ 12 weeks; > 13 weeks includes ≥ 13 weeks.

^{¶¶¶} Includes residents only. Wisconsin reports as surgical, unspecified and does not differentiate surgical procedures[†] from hysterectomy/hysterotomy. All abortions were reported as surgical or chemically induced. For this report, all surgical abortions were classified as surgical and all chemical abortions as medical.

^{****} For the total only, surgical abortions reported without a gestational age were distributed among the surgical abortion categories according to the distribution of surgical abortions at known gestational age.

^{††††} For the total only, medical abortions reported without a gestational age were distributed among the medical abortion categories according to the distribution of medical abortions at known gestational age.

^{§§§§} Percentage is based on a total of 549,697 abortions reported among the areas that met reporting standards for method type.

Total	184,732 (100.0)	169,783 (100.0)	65,000 (100.0)	14,229 (100.0)	9,151 (100.0)	8,622 (100.0)	4,702 (100.0)	456,219 (100.0)

Abbreviation: NA = not applicable.

* Data from 39 reporting areas; excludes 13 areas (California, District of Columbia, Illinois, Louisiana, Maryland, Massachusetts, New Hampshire, New Mexico, New York State, Pennsylvania, Tennessee, Wisconsin, and Wyoming) that did not report, did not report method type by weeks of gestation, did not meet reporting standards, or did not have medical abortion as a specific category on their reporting form.

[†] For each gestational age category, percentages of all method types might not add to 100% because of rounding.

[§] Includes aspiration curettage, suction curettage, manual vacuum aspiration, menstrual extraction, sharp curettage, and dilation and evacuation procedures.

[¶] The administration of medication or medications to induce an abortion; at ≤9 weeks' gestation, typically involves the use of mifepristone and misoprostol; at >9 weeks' gestation, typically involves the use of vaginal prostaglandins.

** Intrauterine instillations reported at ≤12 weeks' gestation have not been included with known values.

Abbreviation: CFR = case-fatality rate.

* Number of legal induced abortion-related deaths per 100,000 reported legal induced abortions. Because a substantial number of legal induced abortions occurred outside reporting areas that provided data to CDC, national CFRs (i.e., number of legal induced abortion-related deaths per 100,000 reported legal induced abortions in the United States) were calculated with denominator data from the Guttmacher Institute’s national survey of abortion-providing facilities. Case-fatality rates were computed for consecutive 5-year periods during 1973–2017 because rates based on <20 cases might be unstable.

† Certain numbers might differ from those in reports published previously because additional information has been supplied to CDC subsequent to publication.

§ An abortion is defined as legal if it was performed by a licensed clinician within the limits of state law.

¶ An abortion is defined as illegal if it was performed by any person other than a licensed clinician.

** Unknown whether abortion was induced or spontaneous.
