Reported to the CDC by State or Territory

View: Cases, Deaths; Measure: Daily, Cumulative; Metric: Raw Totals, Rate per 100,000; Scale: Linear, Logarithmic. Select up to 6 states or territories: California, Florida, Illinois, Michigan, Ohio, Texas.

Cumulative deaths attributed to Covid-19, reported to CDC, in CA, FL, IL, MI, OH, and TX

Cumulative deaths (per 100K), by number of days since .3 total deaths (per 100K) first recorded.

Data Table for Cumulative deaths (per 100K)

CDC | Updated: Nov 22 2020 2:02PM

Table with columns: Day, CA, FL, IL, MI, OH, TX. Contains daily cumulative death counts for six states from day 1 to 241.

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan.

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days per state, and the rate (cases/100,000) per state.

Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a high jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates.
