Cumulative cases of Covid-19, reported to CDC, in CA, FL, IL, MI, OH, and TX

Data Table for Cumulative cases (per 100K)

CDC | Updated: Nov 25 2020 12:16PM

Table with 7 columns: Day, CA, FL, IL, MI, OH, TX. Rows 1-260 showing cumulative cases per 100K for each state.

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020...

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days per state, and the rate (cases/100,000) per state.

Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction.

Navigation and footer area including 'HAVE QUESTIONS?', 'CDC INFORMATION', 'Privacy', 'CONNECT WITH CDC', and 'U.S. Department of Health & Human Services'.
