2009 H1N1 Flu

Content on this page was developed during the 2009-2010 H1N1 pandemic and has not been updated.

- The H1N1 virus that caused that pandemic is now a regular human flu virus and continues to circulate seasonally worldwide.
- The English language content on this website is being archived for historic and reference purposes only.
- For current, updated information on seasonal flu, including information about H1N1, see the <u>CDC Seasonal Flu website</u>.

2009 H1N1 Flu Situation Update

September 4, 2009, 11:00 AM ET

Map: Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists

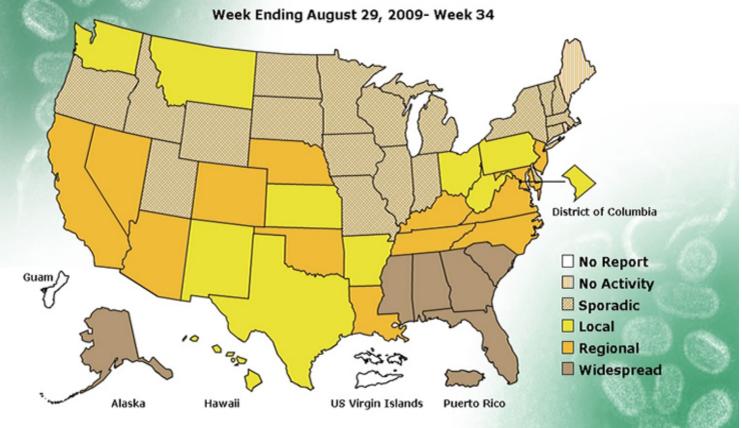

(Activity levels indicate geographic spread of both seasonal and 2009 influenza A [H1N1] viruses)

(Posted September 4, 2009, 2:00 PM ET, for Week Ending August 29, 2009)

FLUVIEW

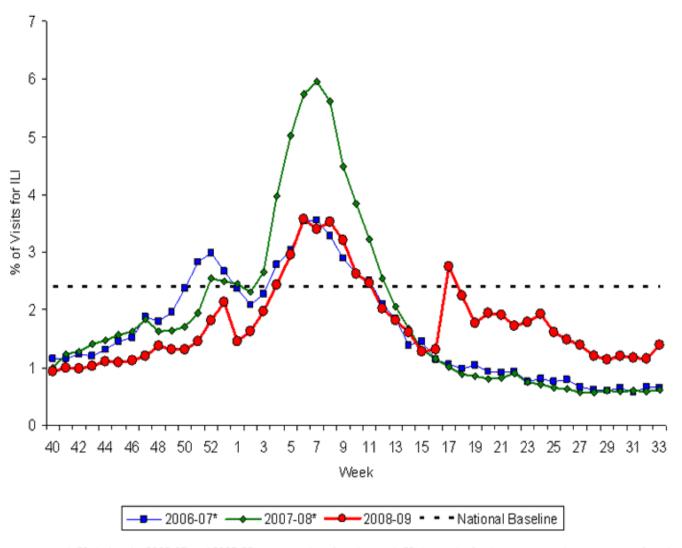

A Weekly Influenza Surveillance Report Prepared by the Influenza Division Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists*

^{*}This map indicates geographic spread and does not measure the severity of influenza activity.

For more details about the data in the map above, see the <u>FluView Surveillance Report</u> for the week ending August 29, 2009. For information about how this map is updated, see <u>Questions & Answers About CDC's Online Reporting</u>.

Percentage of Visits for Influenza-like Illness (ILI) Reported by the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), National Summary 2008-2009 and Previous Two Seasons (Posted August 28, 2009, 6:00 PM ET, for Week Ending August 22, 2009)

*There was no week 53 during the 2006-07 and 2007-08 seasons, therefore the week 53 data point for those seasons is an average of weeks 52 and 1.
