

METAL OPERATOR MINING FACTS – 2006

Mining Operations

In 2006, a total of 280 metal mining operations reported employment to the Mine Safety and Health Administration (MSHA).¹ Metal mines were the smallest mining commodity sector, comprising 1.9% of all mining operations.

- Gold mines comprised 46.8% (n=131) of all metal mining operations. Other common types of metal mines were copper ore (n=34; 12.1%), and iron ore (n=33; 11.8%).
- Nevada had the largest number of metal mines (n=53; 18.9%), followed by Alaska (n=31; 11.1%).

Employees

A total of 32,874 employees,² corresponding to 33,972 full-time equivalent (FTE)³ employees, were reported by metal mine operators.

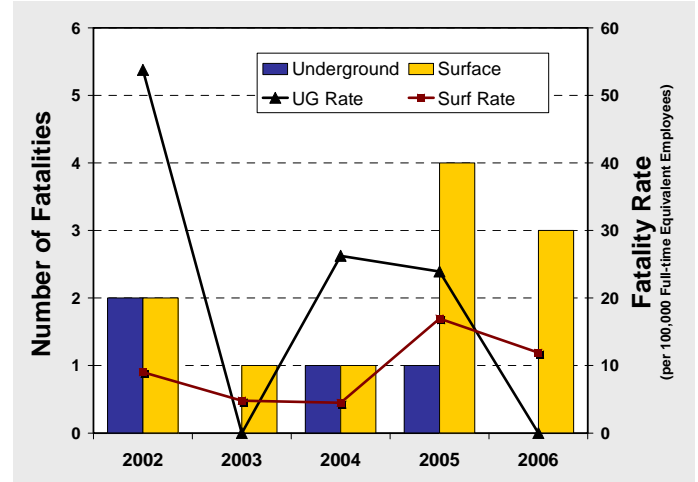

- Within the mining sectors,⁴ metal mine operator employees accounted for 10.3% of all employee hours reported to MSHA.
- Metal operator employee hours were reported for both underground (13.5%) and surface (86.5%) work locations.⁵

Fatalities

Three occupational fatalities occurred among metal mine operator employees in 2006, compared to five fatalities in 2005.

- The metal mine operator fatality rate was 10.1 fatalities per 100,000 FTE employees.

Nonfatal Lost-time Injuries

There were 665 nonfatal lost-time injuries (141 at underground and 524 at surface work locations) among metal operator employees occurring at a rate of 2.2 injuries per 100 FTE employees. A total of 35,287 days lost⁶ from work resulted from these injuries.

- The underground nonfatal lost-time injury rate was greater than the surface injury rate (3.1 vs. 2.1 per 100 FTE workers).
- The most frequent classification of nonfatal lost-time injuries for metal operator employees involved handling materials (n=221; 33.2%).
- Sprains and strains were the most frequently reported nature of injury (n=350; 52.6%).
- The back was the most frequently reported body part injured (n=119; 17.9%) and accounted for 4,751 days lost from work.

Mine and Employment Characteristics, 2006

Commodity and Type of Employer	Number of Mining Operations ¹			Number of Employees ²			Number of FTE Employees ³		
	Underground	Surface	Total	Underground	Surface	Total	Underground	Surface	Total
Coal Operator	675	1,438	2,113	38,253	47,440	85,693	42,598	51,897	94,495

NA Not applicable.

Data source: Publicly released data files of employment and accident/injury/illness collected by MSHA under 30 CFR 50.

Notes: All analyses of accident data exclude office employees. Occupational fatalities exclude all cases under 17 years of age. Further statistical methodology is available on the NIOSH Internet [<http://www.cdc.gov/niosh/mining/statistics/method.htm>].

¹Mines at which only independent contractors were working did not show any employment and were not counted.

²Number of employees is the average number of employees working at individual mines during calendar quarters of active operations.

³Full-time equivalent employees computed using reported employee hours (2,000 hours = 1 FTE).

⁴Mining sectors: coal operators, metal operators, nonmetal operators, stone operators, sand and gravel operators, coal contractors, and noncoal contractors.

⁵Surface work locations include surface operations at underground mines, surface operations (strip or open pit), auger, culm banks, dredge, other surface operations, independent shops and yards, and mills or preparation plants.

⁶Includes actual days away from work and/or days of restricted work activity. For permanently disabling injuries only, statutory days charged by MSHA were used if they exceeded the total lost workdays.
