View and Download COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 22, 2020, with the exception of persons reported to the cruise ships operated by the Diamond Princess and Grand Princess cruise lines. Total deaths are confirmed and probable COVID-19 cases as reported by U.S. states, U.S. territories, New York City, and the District of Columbia (DC) to CDC. Puerto Rico, the U.S. Virgin Islands, New York City, and New York state are shown separately; data for New York State alone total cases and deaths for the Bronx, Kings, Queens, Richmond, Manhattan, and Nassau counties for NYC. When we switched to CDC data, it is reported as New York state excluding U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The map shows total cases per ten thousand people. The bar graph shows daily cases and the rate/100,000 per state. The 7-day moving average of new cases (current day + 3 preceding days / 7) was calculated to smooth expected variations in daily counts. Demographic data for deaths is based on a subset of cases where case-based surveillance. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case data undergoes a thorough confirmation process with jurisdictions before publication. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
