

NONCOAL CONTRACTOR MINING FACTS – 2006

The Mine Safety and Health Administration (MSHA) defines an independent contractor as any person, partnership, corporation, subsidiary of a corporation, firm, association or other organization that contracts to perform services or construction at a mine. Contractors that perform specific types of work are required to report the number of employees who work at coal mines and noncoal mines.

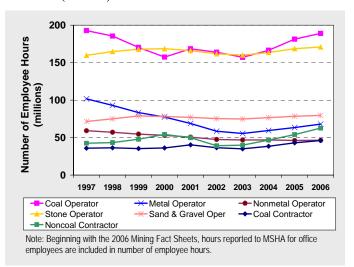

Companies

In 2006, a total of 4,686 contracting companies reported employment at noncoal mines to MSHA, or 63.2% of all independent contracting companies.

Employees

A total of 55,945 employees,¹ corresponding to 31,294 full-time equivalent (FTE)² employees, were reported by noncoal contractors to MSHA.

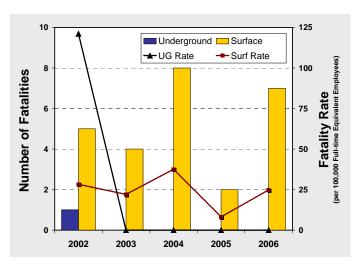

- Within the mining sectors,³ noncoal contractor employees comprised 9.4% of all employee hours reported to MSHA.
- Noncoal contractor employee hours were reported for both underground (4.5%) and surface (95.5%) work locations.⁴

Fatalities

Seven occupational fatalities occurred among noncoal contractor employees in 2006, accounting for 58.3% of all fatalities attributed to independent contractors.

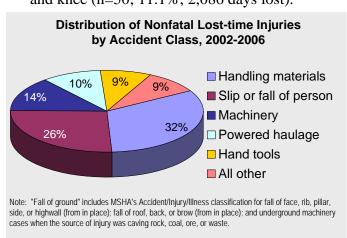

• The noncoal contractor fatality rate for all work locations was 23.6 fatalities per 100,000 FTE employees.

Nonfatal Lost-time Injuries

There were 452 nonfatal lost-time injuries among noncoal contractor employees (49 at underground and 403 at surface work locations) occurring at a rate of 1.5 injuries per 100 FTE employees. These injuries resulted in 24,571 days lost⁵ from work.

- The underground nonfatal lost-time injury rate for noncoal contractor employees was 3.5 per 100 FTE workers, while the surface rate was 1.4.
- The most frequent classification of nonfatal lost-time injuries reported for noncoal contractor employees involved handling materials (n=158; 35.0%), followed by slips or falls (n=111; 24.6%).
- Sprains and strains were the most frequently reported nature of injury (n=167; 36.9%).
- In 2006, the most frequently reported body parts injured were the fingers (n=68; 15.0%; 3,783 days lost), back (n=63; 13.9%; 3,028 days lost), and knee (n=50; 11.1%; 2,086 days lost).

Data source: Publicly released data files of employment and accident/injury/illness collected by MSHA under 30 CFR 50.

Notes: All analyses of accident data exclude office employees. Occupational fatalities exclude all cases under 17 years of age. Further statistical methodology is available on the NIOSH Internet [http://www.cdc.gov/niosh/mining/statistics/method.htm].

¹Number of employees is the average number of employees working at individual mines during calendar quarters of active operations.

To receive NIOSH documents or for more information about occupational safety and health topics, contact NIOSH at **1–800–CDC–INFO** (1–800–232–4636)

or visit the NIOSH Web site at http://www.cdc.gov/niosh

² Full-time equivalent employees computed using reported employee hours (2,000 hours = 1 FTE).

³Mining sectors: coal operators, metal operators, nonmetal operators, stone operators, sand and gravel operators, coal contractors, and noncoal contractors.

⁴Surface work locations include surface operations at underground mines, surface operations (strip or open pit), auger, culm banks, dredge, other surface operations, independent shops and yards, and mills or preparation plants.

⁵Includes actual days away from work and/or days of restricted work activity. For permanently disabling injuries only, statutory days charged by MSHA were used if they exceeded the total lost workdays.
