Cumulative deaths attributed to Covid-19, reported to CDC, in CA, FL, IL, OH, PA, and TX

Data Table for Cumulative deaths

CDC | Updated: Dec 5 2020 12:17PM

Table with 7 columns: Day, CA, FL, IL, OH, PA, TX. Contains daily cumulative death counts for each state from Day 1 to Day 252.

Data Sources, References & Notes: Total cases are based on aggregate counts of COVID-19 cases sent by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020...

Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The chart shows total cases per state, new cases in the last 7 days per state, and the rate (cases/100,000) per state. The 7-day moving average of new cases (current day + 6 preceding days / 7) was calculated to smooth the expected variations in daily counts.

Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ. *Counts for New York City and New York State are shown separately; data for New York State show total cases and deaths for the State excluding data for NYC.
