HOSPITALIZED CASES³ 9,298

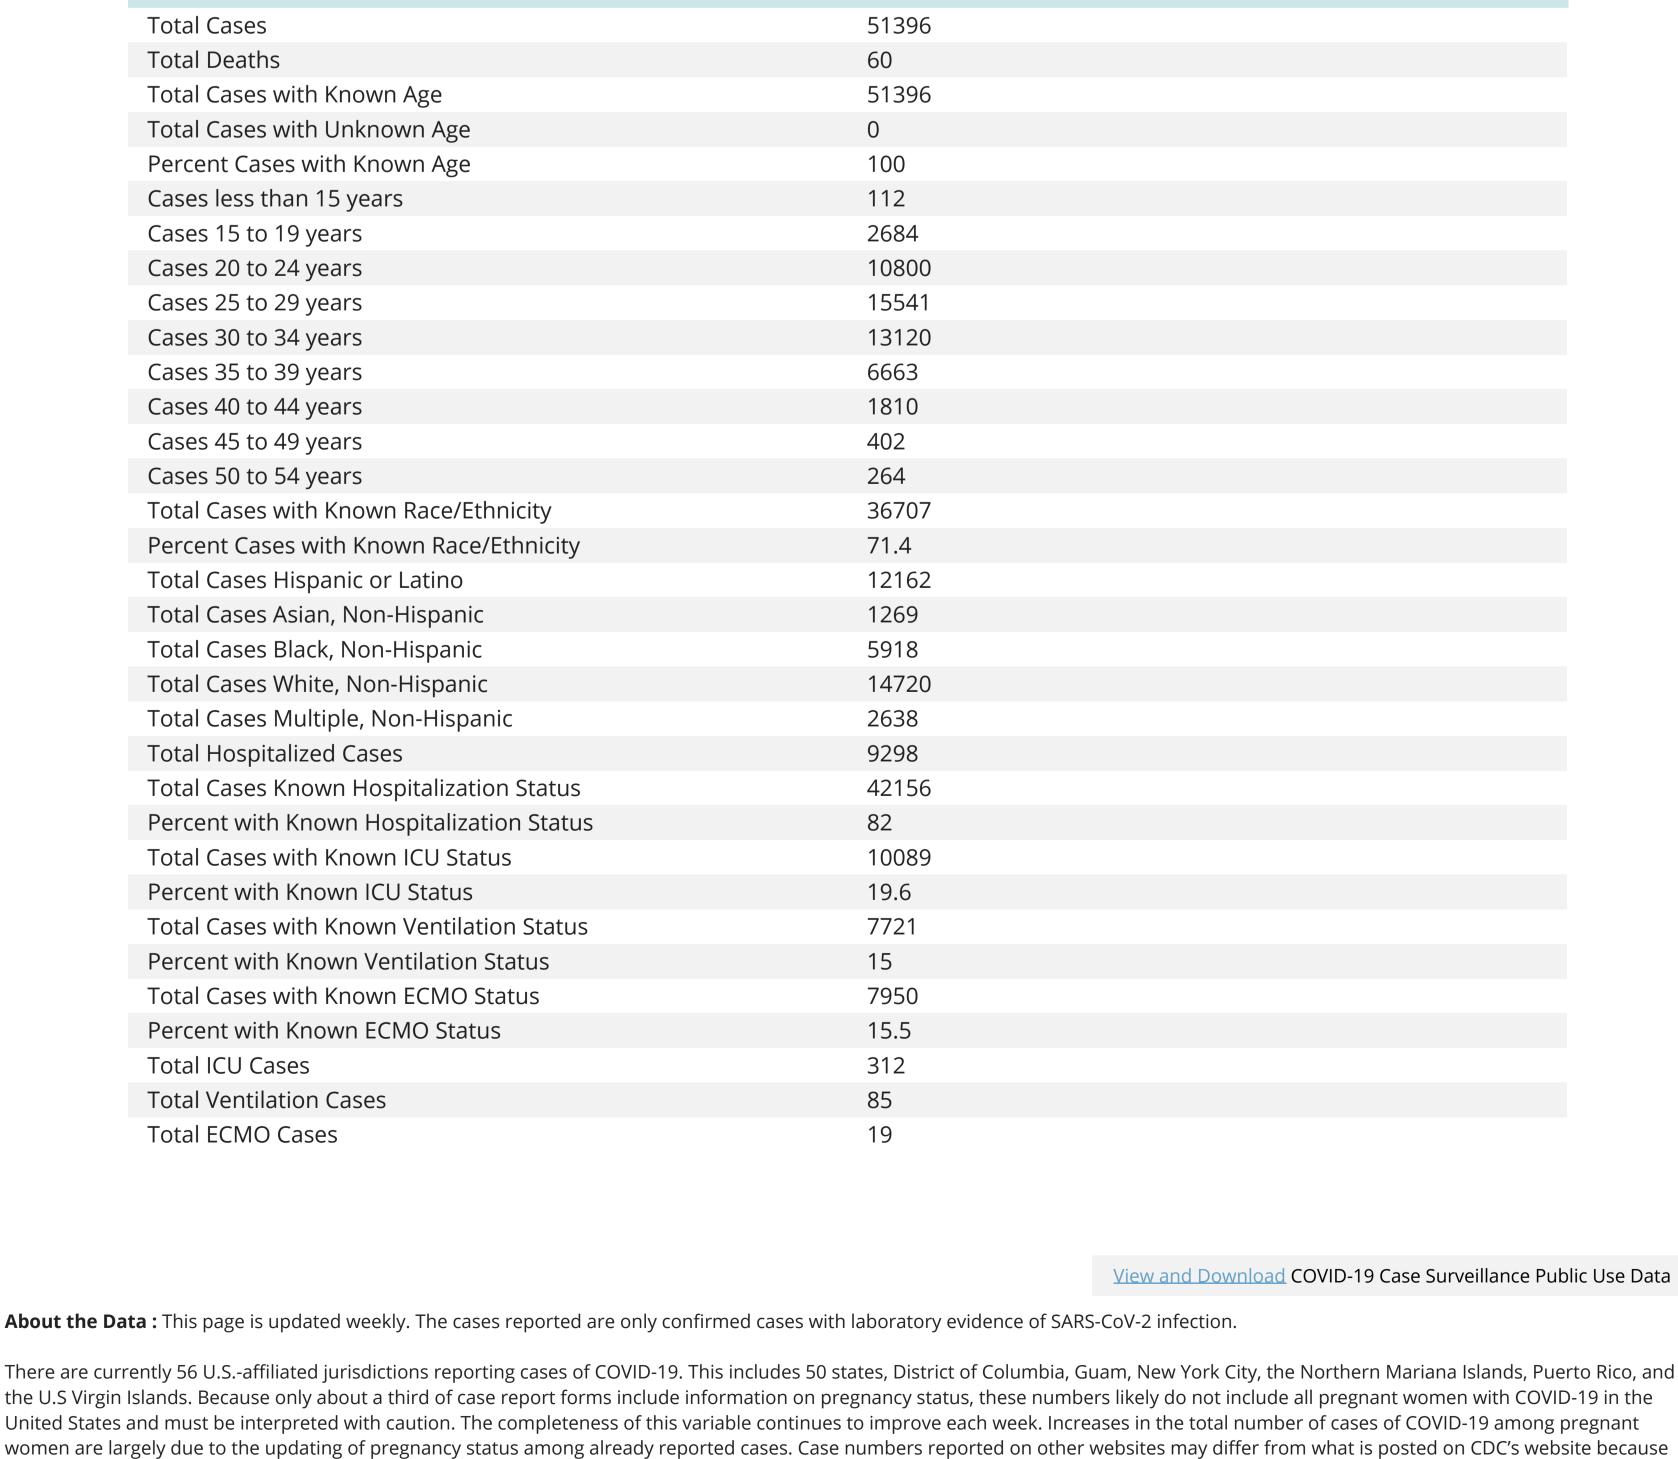

400

Pregnant women with COVID-19 admitted to the ICU, who required invasive ventilation, or who required

Data were collected from 51,396 women, but ICU admission data were only available for 10,089 (19.6%) women, invasive ventilation data

Value

CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur because of the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ. Case counts may fluctuate from week to week due to data quality and cleaning processes.

CDC INFORMATION

As of October 2020, CDC will exclude reports of cases of COVID-19 among pregnant women who are younger than age 9 and older than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with ages less than 9 or greater than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are still included. For more information on how CDC collects COVID-19 surveillance data, see FAQ: COVID-19 Data and Surveillance (https://www.cdc.gov/coronavirus/2019-ncov/covid-data/faq-surveillance.html). For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Babies Network (SET-NET) see COVID-19 during Pregnancy: Birth and Infant
