Data Table for Case Rate by State/Territory

CDC | Updated: Jan 4 2021 12:16PM

[Download Data](#)

State/Territory	Case Rate per 100,000
North Dakota	12,235
South Dakota	11,364
Wisconsin	9,038
Iowa	9,013
Tennessee	8,907
Utah	8,842
Nebraska	8,736
Rhode Island	8,302
Idaho	7,974
Oklahoma	7,895
Kansas	7,817
Indiana	7,814
Wyoming	7,754
Arkansas	7,737
Illinois	7,732
Montana	7,708
Arizona	7,644
Alabama	7,586
Nevada	7,520
Mississippi	7,516
Minnesota	7,457
New Mexico	6,982
Louisiana	6,906
Missouri	6,566
Georgia	6,507
Alaska	6,364
South Carolina	6,248
Florida	6,245
Kentucky	6,196
Texas	6,185
Ohio	6,172
Delaware	6,109
California	6,052
Colorado	5,926
New Jersey	5,540
Massachusetts	5,528
New York City*	5,391
Michigan	5,388
North Carolina	5,386
Connecticut	5,332
New York*	5,222
Pennsylvania	5,170
West Virginia	5,081
Maryland	4,760
Guam	4,430
Virginia	4,306
District of Columbia	4,217
New Hampshire	3,416
Washington	3,354
Oregon	2,792
Puerto Rico	2,468
Virgin Islands	1,951
Maine	1,932
Hawaii	1,521
Vermont	1,249
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	0
Northern Mariana Islands	0
Palau	0

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated interim COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists on August 5, 2020 (<https://www.cdc.gov/nndss/conditions/coronavirus-disease-2019-covid-19/case-definition/2020/08/05/>) However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at CDC's COVID-19 FAQ webpage (<https://www.cdc.gov/coronavirus/2019-ncov/covid-data/faq-surveillance.html>).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates (<https://www2.census.gov/programs-surveys/popest/tables/2010-2019/national/totals/na-est2019-01.xlsx>). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
