State and Territorial COVID-19 Case Surveillance Public Use Data

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated interim COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists (CSTE) in August 2020. Additional information about COVID-19 and Coronavirus Disease 2019 (Novel Coronavirus 2019/2019-nCoV) is available at https://www.cdc.gov/coronavirus/2019-ncov/index.html. More information on how CDC collects COVID-19 surveillance data can be found at COVID-19 FAQ webpage (https://www.cdc.gov/coronavirus/2019-ncov/faq.html#Reporting-of-Cases).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of cases among persons repatriated to the United States. Total deaths are based on aggregate counts of COVID-19 deaths reported by state and territorial jurisdictions to CDC since February 29, 2020. County of residence is determined by the U.S. Census Bureau. 2019 American Community Survey 1-year estimates (https://www.census.gov/programs-surveys/acs/data/data-via-ftp/2019.html#list-tab-2051910). Rates per 100,000 are calculated as the total number reported on COVID-19 cases and deaths divided by the U.S. Census Bureau, 2019 American Community Survey 1-year population estimate.

Rates can be misleading when cases and deaths are reported in the last 7 days, total new cases and deaths in the past 7 days, total cases and deaths since January 21, 2020, and total cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days) divided by the population using the U.S. Census Bureau, 2019 American Community Survey 1-year estimates (https://www.census.gov/programs-surveys/acs/data/data-via-ftp/2019.html#list-tab-2051910) and then multiplied by 100,000. COVID-19 rates are shown by date of case onset or death.

*2019 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 rates and death numbers are calculated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from CDC's numbers because CDC receives data on the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC's COVID-19 counts from previous dates may continually remain as more records are received and processed. Not all jurisdictions report cases daily; some counts are reported in batches and may increase COVID-19 rates and death counts disproportionately on some dates. The previous day's data are updated by combining COVID-19 cases and deaths from other new data sets.

On 10 December, Texas reported 115,395 historical counts of probable cases with dates between 1 November and 10 December 2020. This raised the total number of new cases in Texas and in the United States on 10 December 2020 significantly, affecting the 7-day moving average of new cases.
