Data Table for Case Rate by State/Territory

CDC | Updated: Jan 5 2021 1:00PM

[Download Data](#)

State/Territory	Case Rate per 100,000
North Dakota	12,235
South Dakota	11,376
Wisconsin	9,066
Iowa	9,048
Tennessee	8,965
Utah	8,909
Nebraska	8,767
Rhode Island	8,751
Idaho	8,019
Kansas	7,940
Oklahoma	7,929
Indiana	7,868
Wyoming	7,818
Arkansas	7,780
Illinois	7,772
Montana	7,734
Arizona	7,715
Alabama	7,630
Mississippi	7,575
Nevada	7,566
Minnesota	7,513
New Mexico	7,026
Louisiana	6,930
Missouri	6,566
Georgia	6,556
Alaska	6,399
South Carolina	6,321
Florida	6,296
Kentucky	6,248
Texas	6,248
Ohio	6,223
Delaware	6,196
California	6,127
Colorado	5,964
Massachusetts	5,591
New Jersey	5,565
Connecticut	5,459
New York City*	5,446
Michigan	5,443
North Carolina	5,436
New York*	5,289
Pennsylvania	5,195
West Virginia	5,127
Maryland	4,793
Guam	4,438
Virginia	4,357
District of Columbia	4,237
New Hampshire	3,481
Washington	3,368
Oregon	2,808
Puerto Rico	2,484
Maine	1,976
Virgin Islands	1,963
Hawaii	1,527
Vermont	1,262
Republic of Marshall Islands	7
American Samoa	5
Federated States of Micronesia	0
Northern Mariana Islands	0
Palau	0

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated interim COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists on August 5, 2020 (<https://www.cdc.gov/nndss/conditions/coronavirus-disease-2019-covid-19/case-definition/2020/08/05/>) However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at CDC's COVID-19 FAQ webpage (<https://www.cdc.gov/coronavirus/2019-ncov/covid-data/faq-surveillance.html>).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates (<https://www2.census.gov/programs-surveys/popest/tables/2010-2019/national/totals/na-est2019-01.xlsx>). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* American Community Survey 1-year estimates.

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
